5.1	Overview of the legislation	86
5.2	Security issues experienced in the last years	90
5.3	The market issues related to civilian firearms	94
5.4	Overall comments and remarks.....	97
ANNEX 6.	CASE STUDY ON BELGIUM	98
6.1	Overview of the legislation	98
6.2	Security issues experienced in the last years	101
6.3	The market issues related to civilian firearms	104
6.4	Overall comments and remarks.....	107
ANNEX 7.	CASE STUDY ON POLAND.....	107
7.1	Overview of the legislation	108
7.2	Security issues experienced in the last years	111
7.3	The market issues related to civilian firearms	113
7.4	Overall comments and remarks.....	116
ANNEX 8.	EVALUATION GRIDS.....	117
ANNEX 9.	ANSWERS TO THE EVALUATION QUESTIONS.....	130

Annex 1. Desk research

The desk research relied on existing documents, at international, EU and national level. Documents used as the main source of information can be classified into four categories:

- The legal framework at EU level and on-going policy developments;
- Other relevant information on the application of the Directive in MS, based on possible infringement procedures launched by the EU;
- National legislation implementing the Firearms Directive, related legal acts and other relevant policy or research documents at national level;
- Data sources on trends in criminal offences, illicit trafficking and illicit use of firearms, elaborated by EU institutions and recognized supranational research organisations;
- Statistics, relevant studies and other information (e.g. Amadeus, Eurostat) related to the market of firearms, the main firms operating in the EU, trends in production and trade, etc.

We provide below a list of secondary sources (see par. 1.2) and legislative documents (see par. 1.1) used for the study.

The evaluation took also into account a range of actions the European Commission is taking to manage and reduce the risks posed by civilian firearms, including, among others:

- The strategy “Firearms and the internal security of the EU: protecting citizens and disrupting illegal trafficking”, launched in October 2013 and aimed at addressing vulnerabilities and safeguarding the lawful market.¹
- The work on the common deactivation guidelines (expected to be approved in the next months), and the investigation of the feasibility of an EU marking standard for all weapons.
- The actions taken in line with international developments, starting from the ratification of the Firearms Protocol by the EU² which is expected to contribute to improved controls on the transfer of firearms, by setting high common international standards on imports, exports and transfers and on manufacturing and marking.
- The recently adopted (3 June 2013) Arms Trade Treaty³ which represents the highest possible common international standard for regulating or improving the regulation of international trade in conventional arms. The treaty will enter into force once ratified by 50 States. The Commission proposed a Council decision authorising EU MS to sign the Treaty in May 2013. In March 2014 this Decision was

¹ COM (2013) 716 final. Link: http://ec.europa.eu/dgs/home-affairs/what-we-do/policies/organized-crime-and-human-trafficking/trafficking-in-firearms/docs/1_en_act_part1_v12.pdf

² In March 2013, the Commission proposed that the Council decides to approve the UNFP's conclusion on behalf of the Community (COM(2013) 154 final, Proposal for a Council decision on the conclusion, on behalf of the EU, of the Protocol against the Illicit Manufacturing of and Trafficking in Firearms, Their Parts and Components and Ammunition, supplementing the UN Convention against Transnational Organized Crime). The protocol has been ratified by the Commission in March 2014. Link: <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=COM:2013:0154:FIN:EN:PDF>

³ <http://www.un.org/disarmament/ATT/>.

adopted. EU MS are now free to deposit their ratification instruments in New York.⁴

- The two impact assessments launched by DG HOME on *i*) deactivation, marking of firearms, replicas and alarm weapons⁵ and *ii*) criminal sanctions.⁶
- The strategies designed by the EU, aimed at guiding its external action to control the firearms trade, including the strategy to combat the illicit accumulation and trafficking of Small Arms Light Weapons (SALW) adopted in 2005. The purpose of the SALW strategy is to contribute to an integrated, coherent and visible EU action against the accumulation and spread of such arms and weapons.⁷

Finally, the evaluation of firearms legislation is included in the Commission's Regulatory Fitness and Performance Programme (REFIT) to assess the potential for simplification and reduction of regulatory costs and burdens.⁸

Data availability

With respect to the market, we used official statistical data when available and we completed/enriched them with primary data collected through stakeholders' consultation.

Eurostat Structural Business Survey Data (SBS) were used and allowed for a first analysis of turnover, investment and employment figures for the overall firearms and ammunitions sector (NACE 25.40 - Manufacture of weapons and ammunitions) including both arms for civilian and military use.⁹ SBS data were then integrated with information sourced from the Amadeus database produced by Bureau Van Dijk and concerning the share of employment for each category of firm.

In addition to these sources, we used the Eurostat Prodcom database for data on the production of civilian firearms and ammunitions in the EU28. Data on firearms production used in this study include short guns (such as revolvers and pistols)¹⁰, long guns (such as shotguns, rifles, carbines and muzzle-loaders, including punt-guns, combination shotgun-rifles, sporting guns made to resemble walking sticks)¹¹ and ammunition (such as cartridges and other ammunition and projectiles and parts thereof, including shot and cartridge wads).¹²

⁴ COM (2013) 482, authorising Member States to ratify, in the interest of the EU, the Arms Trade Treaty. Link: <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=COM:2013:0482:FIN:EN:PDF>

⁵ Study to support an Impact Assessment on a possible initiative related to improving rules on deactivation, destruction and marking procedures of firearms in the EU, as well as on alarm weapons and replicas, EY and Sipri, June 2014.

⁶ Study to Support an Impact Assessment on Options for Combatting Illicit Firearms Trafficking in the EU, CSES, under approval of the DG HOME, May 2014.

⁷ Council of the European Union, reference doc. 5319/06. Link: <http://register.consilium.europa.eu/doc/srv?l=EN&f=ST%205319%202006%20INIT>

⁸ COM(2013) 685 final. Link: http://ec.europa.eu/finland/pdf/20131002-refit_en.pdf

⁹ Even though the focus of the current report is on civilian firearms and ammunitions, SBS is the only source providing some insight on the number of SMEs active in the sector as well as reliable statistics on other business indicators

¹⁰ NACE Rev.2 Prodcom Code 25401230. The code excludes military firearms.

¹¹ NACE Rev.2 Prodcom Code 25401250. The code excludes military firearms.

¹² NACE Rev.2 Prodcom Code 25401300. The code excludes military firearms.

For the aggregated EU28 time series, we faced continuity problems due to the varying number of MS during the time period covered by the study.¹³

The Prodcom database reports aggregated data at EU27 and EU28 level, and national figures for a limited number of MS (Italy, Germany, Portugal, Finland, Spain, France and the United Kingdom). To have a breakdown for the 28 MS we used data on the volume of production of firearms sourced from the World Forum on Shooting Activities (WFSA), which provides volumes of production for both short and long firearms for civilian use for all EU MS. The data are a snapshot for 2012; trends at individual country level can be observed only in some sporadic cases where Prodcom displays them.

The Eurostat International Trade database was used for trade flows. Data are available for import and export of civilian firearms and ammunitions towards/from the majority of MS (data are completely missing only for Bulgaria and Romania). These data allow to distinguish between intra- and extra-EU28 trade flows and to conduct comparisons with some important third countries. Eurostat data on trade were integrated with data sourced from the UN Comtrade database. Based on data on trade flows, we conducted a competitiveness analysis based on the index of Revealed Comparative Advantage (RCA).¹⁴

In order to offset the data gap at national level, we contacted the national associations of firearms producers and made use of data collected through interviews during the field research. Information from different sources allowed us to implement cross checks of comparability to quality assure the data.

As for security, a relevant information gap was related to the absence of disaggregated data on the types/categories of firearms circulating in the EU, and/or illegally used and trafficked. Even when available, aggregate data on long-barrelled weapons (i.e. shotguns, hunting rifles and other types) or on handguns (i.e. sporting pistols and other types) include in the same category and mix together very different types of firearms. As a consequence, the detailed analysis of issues related to the criminal use and illicit trafficking was limited.

Finally, gaps were recorded with reference to data on criminal offences and activities involving civilian firearms. Although some information could be collected through international sources, such as the Small Arms Survey, or the publications of the UNODC Offices, comparable and detailed data on trends in criminal offences at EU level were hardly retrievable. As emerged from the impact assessment studies related to marking, deactivation, destruction as well as alarm weapons and replicas, data on the use of replicas, alarm weapons and deactivated firearms in criminal activities are also limited.

Annex 2. Stakeholders involved in the study

2.1 List of stakeholders who answered the survey¹⁵

Category of Stakeholders	Member State	Organisation
MS Authority	Austria	Ministry of Interior
MS Authority	Belgium	Ministry of Justice
MS Authority	Bulgaria	National Agency for Security in cooperation with the Ministry of Interior
MS Authority	Cyprus	Cyprus Police
MS Authority	Czech Republic	Ministry of Interior
MS Authority	Estonia	Ministry of Interior
MS Authority	Finland	Ministry of Interior
MS Authority	Finland	National Police Board
MS Authority	France	Ministry of Interior (<i>2 replies</i>)
MS Authority	Germany	Ministry of Interior
MS Authority	Hungary	National Police Headquarters
MS Authority	Ireland	An Garda Síochána
MS Authority	Ireland	Department of Justice and Equality
MS Authority	Italy	Ministry of Interior (<i>2 replies</i>)
MS Authority	Latvia	State police of the Republic of Latvia
MS Authority	Lithuania	Ministry of Interior (<i>2 replies</i>)
MS Authority	Luxemburg	Police Grand-Ducale
MS Authority	Malta	Police Weapons Office
MS Authority	Netherlands	National Police
MS Authority	Poland	Ministry of Interior
MS Authority	Poland	General Headquarters of Police
MS Authority	Portugal	Public Security Police
MS Authority	Portugal	Polícia Judiciária

¹⁵ The list includes all Institutions involved. Please consider that in some cases more than one representative has been involved to represent the same Institution. As for MS Authorities, Denmark, Croatia and Greece did not reply to the survey. As for industry representatives, stakeholders from 9 MS (AT, BG, CY, CZ, DK, LT, PL, RO, SI) did not reply to the survey out of the 21 MS originally targeted. As regards representatives of users, stakeholders from 12 MS (CY, DK, EE, ES, LT, LU, NL, PL, PT, RO, SI, SK) did not reply, out of the 23 MS originally targeted.

Evaluation of the Firearms Directive

KEY FEATURES OF THE GERMAN CASE STUDY	
The civilian firearms' sector	<ul style="list-style-type: none"> Germany is the second firearms-producing EU MS (the first is Italy). According to the Federal Statistical Office, 298,898 civilian firearms were produced in 2012 and 947,841 in 2013.⁴² German production is very export-oriented and its main extra-EU countries of destination are USA and Russia. As for intra-EU exports, the main destinations are France, Italy and Austria. As regards import, Russia and Italy are its most important partners.⁴³ The retail market consists in between 1,200 and 1,500 dealers.⁴⁴
The ownership of civilian firearms	<ul style="list-style-type: none"> Germany is the first EU MS for the number of legal civilian firearms circulating in the country (i.e., 6.6% of German population): there were around 5,3 million⁴⁵ registered firearms and 1,5 million owners (of which 340,000 hunters) in 2013.⁴⁶ Nearly 60.000 EFP holders are registered in 2014.
The transposition of the Firearms Directive and the national legislation	<ul style="list-style-type: none"> A national law regulating firearms is in force since 1938. Additional requirements have been introduced by the national law in relation to specific national security needs, the firearms' ownership, and proof testing of gas (alarm) weapons.
Main issues related to security	<ul style="list-style-type: none"> Decreasing trend of crimes committed with firearms; No major issue in relation to the criminal use of civilian firearms by legal owners; Concerns related to the criminal use of objects having the appearance of a firearm.
Main issues related to the market	Obstacles to the internal market due to differences in implementing rules at national level (e.g., different categorisation of the same firearm across MS, different rules applied to alarm weapons, different requirements for firearms' transfers).
Good Practices	The electronic national register of firearms centrally managed by the Ministry of Interior which in the future will allow tracing the whole story of a firearm (from production to destruction).

4.1 Overview of the legislation

Germany has a comprehensive national legislation on firearms (The Weapons Act) since 1938. The transposition of the Firearms Directive in 1991 and its amendment in 2008 have not posed major problems as most provisions of the Directive were already included in the national law and no grey area has been highlighted. Furthermore, the German Weapons Act includes a number of provisions and rules which are not set by the Directive but that have been introduced by the German Government with the aim of ensuring a proper level of security at national level.

⁴² Including: rifles, shotguns, revolvers and pistols. A high share of this number shall be attributed to firearms destined to public officers as some police departments got new weapons in 2013.

⁴³ Eurostat International Trade data.

⁴⁴ Association of manufacturers of hunting and sport weapons and ammunitions.

⁴⁵ Ministry of Interior. Reliable statistical data on the development of legally held firearms in Germany will only be available from the National Firearms Register in the future.

⁴⁶ Central Directorate of Judicial Police.

4.1.1. *Directive's implementation at national level with reference to the key provisions*

Categories of firearms: Firearms in Germany are classified according to an extensive list of categories as stated in the Weapons Act. This list has been easily reconciled with the categories defined in Annex I of the Firearms Directive⁴⁷ and namely to categories A (forbidden firearms), B (firearms subject to authorisation) and C (firearms subject to declaration). Category D does not include firearms but only other weapons such as compressed air weapons, weapons to fire blanks or warning shots, spring-operated weapon, etc. In Germany no firearm can be bought without an authorisation or a declaration. Local authorities, law enforcement authorities as well as producers and retailers usually rely on the list included in the Weapons Act in their daily activities.

Ownership: Strict rules regulate the acquisition, possession, and trading of firearms. Specific requirements, including medical checks, are to be fulfilled for the ownership and purchase of a firearm.⁴⁸ The number and types of checks performed by the competent authorities to issue a licence are one of the specificities of the German case study. In general the process envisages to acquire a licence, then to acquire the firearm and then to have the firearm registered.⁴⁹ Concerning gas (alarm) weapons, no specific licence is needed to purchase or possess them. However, carrying such weapons does require a licence⁵⁰ (the "minor firearms certificate"⁵¹). In Germany ammunitions follow the same rules of firearms and a permit is always requested for their purchase.

The validity of the licence for the acquisition of a firearm is one year, while licence for its possession is unlimited. However reliability, personal aptitude and need are re-assessed in periods not exceeding three years.

Dealers and brokers: According to Annex 1, Section 2 no.9 of the Weapons Act, "*any person who buys, offers for sale, takes orders for or looks for, entrusts to others or arranges the acquisition, sale or handing over of guns or ammunition on a commercial or independent basis as part of a business undertaking*" is deemed to be dealing in weapons. All retail actors operating on the internet market are considered dealers according to the national law and need a specific authorisation. In order to perform the activity, dealers must fulfil the general

⁴⁷ During the EY round table in Berlin (on June, 4th), the Ministry of Interior reported that no major complaints on the categorisation of firearms according to the Directive had been raised by local authorities during the periodic meetings the Federal Government organises with local authorities.

⁴⁸ According to the Weapons Act: "In order to be granted a licence, applicants shall: be at least 18 years of age (Section 2(1)), have the necessary reliability (Section 5) and personal aptitude (Section 6), demonstrate the necessary specialized knowledge (Section 7), demonstrate a need (Section 8), and enclose proof of liability insurance cover of one million euros for personal injury and property damage when applying for a weapons or shooting licence. For medical checks (Section 6): (2) If there is reason to doubt personal aptitude under subsection 1, or if there is reason to doubt documentation supplied by the applicant, the competent authorities shall require the person in question to obtain a certificate of physical or mental aptitude from a public health officer, specialist or psychologist at his or her own expense. (3) Persons under 25 years of age shall submit a certificate of mental aptitude from a public health officer, specialist or psychologist at their own expense on applying for the first time for a licence to acquire and own a gun".

⁴⁹ Weapons Act, Section 10.

⁵⁰ A licence is needed for carrying gas weapons, while the transfer of gas weapons in Germany or to other MS does not require a licence.

⁵¹ "Kleiner Waffenschein".

requirements for obtaining a licence under the Weapons Act and the special requirements of Section 21 of the Weapons Act.⁵²

As regards brokers, there is no definition under the Weapons Act and the term is not commonly used in Germany. Therefore brokers are subject to the same rules of dealers.

Licence validity is unlimited. However, according to the Weapons Act the licence "*shall expire if the licence holder does not begin the activity within a year from the date the licence is issued or has not carried out the activity for a year. These deadlines may be extended on special grounds*".⁵³ The licence conditions are re-evaluated in periods not exceeding three years.

The local authority in charge of the application of the Weapons Act decides on the frequency of controls of dealers' information registers, and according to Section 17(5) of the General Ordinance to the Weapons Act decides on the frequency of controls. These controls aim at the observation of provisions of weapons and commercial law (e.g.: storage, book keeping).

Marking and traceability: Germany is a member of the C.I.P. and only firearms proofed and marked according to the C.I.P. standards can enter the German market.⁵⁴ According to section 24 par. 1 of the Weapons Act firearms' manufacturers should mark at least one essential component of the weapon with the following information:

- the name, trading name or registered trademark of a weapon manufacturer or a weapon dealer with a commercial establishment within the territory governed by this Act;
- the country of manufacture (national abbreviation under ISO 3166);
- designation of the ammunition, or, if no ammunition is used, the designation of the projectiles;
- in the case of imported weapons, the country of importation (national abbreviation under ISO 3166) and the year they were imported, and
- a serial number.

There are different technologies used by producers/gunsmiths to mark guns and gun components (e.g. lasing, pressing, engraving). All firearms coming from non-C.I.P. members are subject to the proof tests of the National Proof House.

All gas (alarm) weapons produced or imported into the country must be compliant with specific technical standards and must pass the proof test of the PTB.⁵⁵

Regarding traceability, Germany has implemented an electronic national register of firearms (NWR, Nationales Waffenregister) on the 1st of January 2013, two years ahead

⁵² Weapons Act, Section 21(3): "A [dealer's] licence shall be refused if: the applicant does not have the necessary reliability (Section 5) or personal aptitude (Section 6); the applicant does not comply with the requirements of the Crafts Regulation Act governing artisanal activities requiring a licence [...]; the applicant does not demonstrate the necessary specialized knowledge [...]; this shall not apply if the applicant does not manage the business or a dependent or independent branch him- or herself. (4) The licence may be refused if the applicant: is not a German national as defined in Article 116 of the Basic Law, or is neither ordinarily resident nor has a commercial establishment in the territory governed by this Act".

⁵³ Weapons Act, Section 21(5).

⁵⁴ According to section 24 par. 1 of the Weapons Act: "Anyone who manufactures or transfers guns on a commercial basis into the territory governed by this Act shall clearly and permanently mark at least one essential component [...]. Essential components of guns requiring a licence shall be marked with a serial number and recorded in weapons registers pursuant to Section 23 when traded individually".

⁵⁵ Physikalisch-Technische Bundesanstalt (PTB): authority responsible to test and proof the anti-convertibility of alarm weapons produced or entering the German territory. One of the fields of work of the PTB is the type testing, which consists in approving new models of alarm weapons and shooting tools according to the German Proof Testing Act before they are extensively produced.

before the entry into force of the Firearms Directive's provision.⁵⁶ The system is centrally managed by the Ministry of Interior, and 550 local authorities responsible for issuing authorisations and licences have access to the system and can feed it with the information they collect on a daily basis. The system records the following characteristics on each firearm: the EU-Category (A/B/C/D), the model code (e.g. long rifle, shotgun, revolver), the sub-categorisation, the manufacturer, the serial number, the calibre. In compliance with the Directive's requirements, the system is also filled with the names and addresses of the supplier and of the person acquiring or possessing the firearm, with information about the permit and about the responsible weapon authority.⁵⁷ Even though there are still some errors in the recorded information due to incomplete data or too general information, the quality is continuously improving. Despite the gathered data, the system does not allow to trace the story of a firearm since its creation (information on the producer) until its deactivation or export to another MS. To this end there is a project (the German Firearms National Registry 2) to extend the database so that it can better support law enforcement authorities to fight illicit trafficking and keep record of all firearms' owners.

At individual level and in compliance with the Directive's article 4(4), anyone who manufactures guns for commercial purposes or anyone who acquires, sells or hands over guns to others on a commercial basis (dealers) shall keep a weapon register recording the type and quantity, origin and the precise position of these guns.

Deactivation: Germany has adopted specific deactivation standards⁵⁸ and the National Proof House is responsible for the implementation of these standards and for the control of their correct application. Deactivated firearms and guns considered as toys under the Weapons Act can be freely bought and no transfer licence is required.

European Firearms Pass: In Germany there are currently 60,000 EFP holders. Local firearm administrations, either police or other authorities at local or county level, are responsible for the issuance and renewal of the EFP. The papers requested for the issuance of the EFP are listed in Section 33 par. 2 of the General Ordinance to the Weapons Act⁵⁹, and include a recent

⁵⁶ Before that date, information about firearms and owners was collected only at federal level and not always through digitalized mechanisms.

⁵⁷ For more information about the NWR, see: http://www.bva.bund.de/SharedDocs/Downloads/EN/BVA/NWR_Flyer1_english.pdf?__blob=publicationFile&v=4

⁵⁸ According to Annex 1 to the Weapons Act, Section 1, Subsection 1, No. 1.4: "Guns shall be deemed unserviceable if:

1. the chamber is modified permanently so that neither ammunition nor propelling charges can be loaded,
2. the breech has been rendered permanently inoperable,
3. the trigger in grips or other essential components of short handguns have been rendered permanently inoperable,
4. in the case of short firearms, the barrel has
 - a continuous slit at least 4mm wide along the barrel as far as the muzzle
 - at least 3 calibre-size drill holes at 3 cm intervals, or
 - other similar barrel modifications over its entire length, starting at the chamber;
5. in the case of long firearms, the third of the barrel facing the chamber has
 - at least 6 calibre-sized drill holes or
 - other similar barrel modifications and
 - is permanently sealed with a calibre-sized tempered steel pin in front of the chamber facing the muzzle,
6. a gun shall have been rendered permanently unserviceable if it or its essential components cannot be restored to working order using standard tools".

⁵⁹ According to Section 33 par. 2 of the General Ordinance to the Weapons Act: "The applicant is to provide the information pursuant to Section 30 (1), sentence 2, nos. 1 to 3. He is to submit a recent photograph [...]. (3) For the purposes of issuance of the licence pursuant to sentence 1, the applicant is to provide the following information:

photograph, personal details, information on the weapon(s) and on the ammunition(s). Fees for obtaining the EFP differ from one Bundesland (Province) to the other. Approximately, they are estimated by the national German hunters' association to be between 30 to 60 Euros for the first issuance and between 10 to 20 Euros for the renewal. As for the time required for obtaining the EFP, it depends on the work load of the authority in charge, but usually it does not take more than six weeks. The EFP is valid in general for five years, but exceptions are provided for some types of weapons.⁶⁰

Limitations are provided for the maximum number of firearms which can be entered in the German territory by hunters or marksmen albeit equipped with the EFP. According to the Weapons Act Section 32 (3), hunters may take for hunting purposes up to three long firearms of categories C and D (and relative ammunition); marksmen may take for the purpose of recreational shooting up to six guns of categories B, C and D (and relative ammunition); and traditional marksmen may take up to three single-shot or repeating long firearms of categories C and D (and relative ammunition) in order to take part in a traditional shooting event.

Information sharing: At national level, there is an IT system in place for sharing information between law enforcement agencies, especially police forces. At international level (with other EU MS), information is exchanged via the Europol channel or Europol Information System (EIS) as well as via SIS in the Schengen-Area (for stolen firearms). The databases managed by Europol allow a fast exchange of information among law enforcement authorities in cases of criminal offences involving firearms coming from different MS. Furthermore, it is possible to link with the U.S. via ATF's eTrace System.⁶¹

The implementation of the Firearms Directive brought to the creation of a number of networks and improved the overall exchange of information. The Contact Group on civilian firearms in the internal market and its related network of national contact points is a good example of cooperation among MS and seems to work well according to the Federal Criminal Police Office (the German contact point). In case specific issues are encountered in the transfer of firearms from one MS to Germany, bilateral contacts are quick and effective and obstacles may be overcome easily. The European Firearms Expert Group (EFE⁶²) is considered another

-
- Personal details: First name and surname, date and place of birth, place of residence and addresses, number date of issue of passport or identity card and issuing authority;
 - on the weapons: in case of guns, quantity and type of weapons, category in accordance with Enclosure 1, Part 3 to the Weapons Act, company name or registered trademark of the manufacturer, model designation, calibre, production number and, where appropriate, C.I.P. proof markings; in case of other weapons, quantity and type of weapons;
 - on the ammunition: quantity and type of ammunition, category in accordance with Council Directive 93/15/EEC [...], company name or registered trademark of the manufacturer, calibre and, where appropriate C.I.P. ammunition proof markings."

⁶⁰ According to Section 32 (6) of the Weapons Act: "where only single-shot long weapons with a smoothbore barrel or with smoothbore barrels are entered in the pass for hunters or marksmen, the period of validity shall be ten years. The period of validity may be extended by two periods of five years respectively".

⁶¹ "The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) is the federal agency that is authorised by Congress to stem firearms-related violent crime and to regulate the firearms industry in America. ATF's National Tracing Center (NTC) assists domestic and international law enforcement agencies by tracing the origin of firearms that have been recovered in criminal investigations. Firearms tracing through eTrace is the systematic internet-based tracking of a recovered firearm from its manufacturer or importer and subsequent introduction into the distribution chain (wholesaler/retailer) to the first retail purchase. [...] European countries currently using eTrace include: Belgium, the Czech Republic, Finland, Germany, Slovakia, Spain and the United Kingdom." For further information see: <https://www.atf.gov/publications/factsheets/factsheet-ettrace.html>

⁶² Established in 2004, composed of firearms experts from each MS, aimed at ensuring, through the joint efforts of all EU MS, a more effective fight against the illegal movement of firearms.

valuable platform for the exchange of information across MS. In addition, German competent authorities are involved in a number of working groups (e.g., legal loopholes, firearms flows).

Penalties: Penalties and fines are disciplined in Sections 51, 52 and 53 of the Weapons Act.

4.1.2. Stakeholders' positioning on the implementation of the Firearms Directive

In general, stakeholders did not face any particular problem in the transposition and implementation of the Directive. They think it is a MS prerogative to enforce it in the best way and to define the most appropriate security measures to face national threats. The introduction of more detailed provisions at EU level would hinder the principle of subsidiarity and would limit too much the responsibilities of different MS in the field of security. The Directive's implementation did not cause any additional administrative burden, given that the national laws in force already established a more stringent regime than the Directive requires.

The current categorisation of firearms is considered simple and satisfactory by representatives of both competent Authorities and producers/users, who do not see any need to reduce the categories to "prohibited" and "under authorisation" firearms. Furthermore, the existence of only two categories of firearms would bring category D firearms to the illegal market as there would be no incentives for category D firearms' owners to register these types of firearms.

As regards the EFP, differences in the implementing rules of the Directive's provisions posed some obstacles to the free movement of hunters and sport shooters, and namely:

- Differences in the registration of firearms on the EFP: a firearm which is allowed in one MS may be prohibited elsewhere;
- Differences in the needed documents for mobile hunters and sport shooters: some MS ask for additional documents (e.g., national licences) to the EFP in advance.

4.2 Security issues experienced in the last years

Trends in firearms enabled crime: Weapon-enabled crime is not a major problem in Germany and the legal possession of firearms does not represent a major issue in terms of security. The number of crimes committed with firearms is low according to the Federal Ministry of Interior (10,093 in 2013), it can be assumed to be approximately 0.2% of all crimes committed and it has been declining for many years. This trend may be partly attributed to the progressive strengthening of the national legislation on firearms. Specifically, in 2003 and 2009, after two cases of school shootings⁶³, rules for weapon owners became stricter (e.g., more stringent rules on storage of firearms, reliability and aptitude of permit holders).

Involved stakeholders reported that legally owned firearms are difficultly diverted into the illicit market which seems to be fed directly by dedicated producers. Indeed, assumptions have been done by the EU association of European Manufacturers of sporting firearms on the existence of producers which channel their whole production to the illegal market.

Some concerns are raised in relation to the use of objects having the appearance of a firearm. Indeed, in Germany, alarm weapons (not converted) appear to be used in criminal

⁶³ In 2009 Winnenden, in 2003 Erfurt.

activities where a “lookalike” of a firearm is useful for threatening another person. In 2013 a total of 412 weapons were seized at crime scenes and in 69.6% of cases these were gas/alarm/air propelled guns⁶⁴.

Differences in the regulations applied by MS to alarm weapons seem to have negative impacts in terms of security. A number of cases of conversion have been recorded in several MS and some of them (e.g.: the Netherlands and Lithuania) have put a ban on this kind of weapons to guarantee the security of national citizens. German producers have agreed that most of the converted alarm weapons come from Turkey. These weapons seem to be easily convertible into real firearms as they are built with strong materials and according to softer standards than those used in the EU.

Illicit firearms trafficking: No valuable estimates on the illicit firearms trafficking can be done.⁶⁵ Most critical countries are post-conflict areas, North Africa and eastern EU MS. The EU representative of producers reported recent Europol and Interpol investigations where a number of Russian military firearms have been found in Germany as a result of a massive sell after the unification of Germany.

Derogations for hunters/marksmen: Even though the Directive gives softer rules to hunters and shooters, there is no evidence of criminal acts committed with this kind of firearms in Germany. It may happen, but usually criminal offenses are done with illegal weapons.⁶⁶

Future developments: The use of 3D printing techniques to manufacture firearms or firearms' components is not a major issue at the moment according to involved stakeholders. Firearms produced with these techniques are either not functional, dangerous to the shooter or still too expensive if compared with the price of Kalashnikovs that can be bought on the illegal market (i.e. representatives of German producers made an estimation for the African black markets of \$25 for an AK47). No cases of 3D printed firearms or firearms' components have been recorded in Germany but there is a common agreement on the need to monitor related future developments.

4.3 The market issues related to civilian firearms

Market Structure: Germany is the second civilian firearms producer in Europe and its market is composed of 8 large manufacturing enterprises⁶⁷, 16 SMEs and 76 micro enterprises.⁶⁸ The production industry is supported by a network of dealers, counting between 1,200 and 1,500 operators. Germany is also very competitive in the sector of civilian firearms, accounting for 20% of European exports.⁶⁹ The German sector of civilian firearms reacted positively to the EU

⁶⁴ Federal Criminal Police Office, Annual Situation Report on Firearms Crime 2013.

⁶⁵ According to a statement by the Head of the Police Trade Union, between 10 and 30 million firearms are illegally possessed in Germany (January 2013).

⁶⁶ Source: German association of manufacturers of civilian firearms and ammunition and an international federation for sport shooting (Round Table, June, 4th Belin).

⁶⁷ According to an association of manufacturers of civilian firearms, the main companies are: Blaser Holding, Merkel Jagd- und Sportwaffen and H. Krieghoff for hunting weapons; Carl Walther, J.G. Anschütz & Co. and Feinwerkbau Westinger & Altenburger for sporting weapons; UMAREX Sportwaffen, Weihrauch & Weihrauch Sport &Co. and German Sport Guns for airguns/alarm weapons/airsoft weapons; RUAG Ammotec, Nammo Schönebeck and Brenneke for ammunitions.

⁶⁸ For both firearms and ammunitions production. Association of manufacturers of civil firearms (Survey).

⁶⁹ Eurostat International Trade Database.

crisis of 2007 and the production remained quite stable over the years with no significant reduction in the number of companies operating in the sector.

4.3.1. *Stakeholders' positioning on the impact of the Directive on EU internal market functioning*

Producers: No additional burden on German producers and users results from the implementation of the Firearms Directive as the Weapons Act already included stringent rules before the entry into force of the Directive. The German framework on firearms regulation brought higher costs for operators in comparison to other MS, but this does not seem to create a major economic disadvantage for German producers/retailers in the internal/international market. As for the obligation of information sharing and the marking requirements, the relative administrative burdens are considered proportionate.

The main obstacles to the internal trade relate to:

- the fact that firearms are classified differently across MS (e.g., alarm weapons that in some MS are considered as firearms and in the majority of EU MS are not);
- varying implementing rules at national level: implementation of the national firearms legislation in Eastern countries has been pointed out as one of the weakest point of the internal market by representatives of producers.⁷⁰ Additional concerns have been raised by producers' representatives in relation to the stringent interpretation of the Directive by Eastern countries when asking for additional documents to German exporters to enter their territories.

Users: Before 1991, crossing the borders was difficult for hunters and sporting shooters because of the different regulations within MS. The Directive and the introduction of the EFP simplified their movement and harmonised the requested documents. However, some difficulties in the free movement of hunters still persist and have been highlighted by user's representatives. Namely, a few years ago, German hunters moving to France with their hunting rifles were requested to buy a new firearm in France as their rifles were prohibited according to the national legislation. The same happened in Italy where *Parabellum 9mm* commonly used in sport shooting competition is included in category A firearms according to the Italian legislation. In general this obstacle is not perceived as a major issue, given that the movement of German hunters and marksmen is very limited and they usually practice within the national borders.

When discussing the firearms market, all German stakeholders agreed on the need for a more harmonized implementation of the Directive to equalize competition among MS. The current areas of differentiation refer to marking and anti-convertibility standards. As regards marking, some MS (LU, LT, SE) require the marking of firearms imported from other EU MS even though they are already marked (the so-called "double marking"), which creates an obstacle to market access. As for the anti-convertibility standards of alarm weapons, Germany has very strict requirements and all alarm weapons are verified by the PTB before entering the market. Other countries do not have to bear these additional costs, which result in disproportionate competition.

⁷⁰ Romanian national legislation seems not to be clear to German producers who do not feel confident on which types of firearms are legal and which are not.

The adoption of C.I.P. marking standards by all MS is welcome by German producers as well as the adoption at EU level of anti-convertibility standards similar to those adopted at national level by the PTB.

4.4 Overall comments and remarks

In Germany the relevance of the Firearms Directive appears to be weakened by a comprehensive national legislation in force well before the entering into force of the Directive

⁷¹ These figures include: rifles, shotguns, revolvers and pistols. Weapons for the police departments are recorded under the category "Revolvers and pistols". The high increase in 2013 can be explained as some police departments got new weapons.

⁷² Data for volume is not available.

and addressing additional national-specific security concerns. No significant reduction in the number of crimes committed with civilian firearms in Germany can be identified after the introduction of the Directive in 1991 and its amendment in 2008 but rather after changes in the national law.

The implementation of the Firearms Directive in Germany is generally satisfactory for all the categories of stakeholders involved in the case study and there is a common agreement on the need to keep the EU framework as it is with some minor improvements regarding:

- The introduction of common deactivation standards;
- The design of common anti-convertibility standards;
- The use of the EFP as the only document needed for travelling within the EU;
- The consistent implementation of the Directive's provisions;
- The creation of an extensive list with all weapons allowed and forbidden in each MS to better enable trade.

The following issues have been pointed out as key areas of future intervention of the EU:

- The adoption of the C.I.P. marking standards by all MS;
- The harmonization of national implementing rules (e.g., documents requested for firearms transfers);
- The improvement of the fight against the illegal market, which is considered as a parallel market with limited links with the legal market.

Annex 5. Case study on FRANCE

KEY FEATURES OF THE FRENCH CASE STUDY	
The civilian firearms' sector	<ul style="list-style-type: none"> French production is small and stable. According to Eurostat, 5,000 long firearms were produced in 2013. France is a net importer. As for EU MS, its main partners are Italy and Belgium, while Turkey and the US are the first sources of import among extra-EU countries. As regards exports, the main destinations of French production are Russia and Germany. French network of dealers and brokers counts between 800 and 2,000⁷³ operators.
The ownership of civilian firearms	<ul style="list-style-type: none"> France is the second EU MS (after Germany) for the number of legal civilian firearms circulating in the country: 3,865,300 registered firearms in 2013⁷⁴. Nonetheless only 5.8% of the French population owns a firearm.⁷⁵ Long historical tradition of hunting with the highest number of registered hunters in EU (i.e., 1,230,000 hunters in 2013⁷⁶). More limited number of registered marksmen: 230,525 in 2013;⁷⁷ Most of hunters and sport shooters do not move across EU MS due to the number of clubs in France. Only 39,378⁷⁸ hunters and marksmen have applied for the EFP in 2012.
The transposition of the Firearms Directive and the national legislation	<ul style="list-style-type: none"> A national law regulating firearms has been in force since 1939. The adoption of the amendment of the Firearms Directive in 2012 started a simplification and rationalisation process on the national regulatory framework; Additional requirements were introduced by the national law in relation to: safety storage of short guns, and marking (CIP proof marks).
Main issues related to security	<ul style="list-style-type: none"> 63% of all firearms seized by the Police in 2011 were civilian firearms; Increase of 92.5% in firearms thefts between 2005 and 2011 (67% of firearms thefts in 2011 involved hunting firearms); Reactivation of deactivated firearms; Converted alarm weapons.
Main issues related to the market	Some obstacles to the free movement of hunters and marksmen persist as a consequence of the different implementation of the EFP at national level.
Good Practices	The digitalisation of controls on pending interdictions for the issuance/renewal of hunting licence or for the acquisition of a new firearm by a hunter.

5.1 Overview of the legislation

Firearms in France are regulated through a national legislation in force since 1939 and modified a number of times according to the historical needs. With the adoption of the 2008 amendment of the Firearms Directive, a significant renovation and simplification of the national regulatory framework for firearms started. The most important step was the adoption of a law in 2012⁷⁹ establishing a modern, simplified and preventive control over weapons. This law is

⁷³ This figure includes gunsmiths (in French "*armuriers*") estimated between 800 and 1,000. Source: EY Roundtable in Paris.

⁷⁴ Ministry of Interior.

⁷⁵ As a term of comparison, in Finland 29.4% of the population owns a firearm.

⁷⁶ Ministry of Interior.

⁷⁷ Ministry of Interior, AGRIPPA database.

⁷⁸ COM(2012) 415 final.

⁷⁹ LOI n° 2012-304 du 6 mars 2012 relative à l'établissement d'un contrôle des armes moderne, simplifié et préventif.

one of the few national laws unanimously voted by both the right and the left wing: initially approved by the right wing, its implementing regulation was then voted by the left wing.

It regulates all types of weapons, including both civilian and military firearms, and defines all the essential components specifying the regulations to be applied.

Originally the Ministry of Defence had the responsibility of the coordination of the firearms regulation. In 2013, after the entry into force of the new weapons law, a new share of competences entered into force (and is still ongoing). All issues related to the acquisition and ownership of civilian firearms were brought under the responsibility of the Ministry of Interior, while all issues related to military firearms and material remained under the responsibility of the Ministry of Defence. Regarding imports, exports, transits and transfers of firearms the Ministry of Defence together with Customs are responsible for the "Military list", while the Ministry of Interior and the Customs are responsible for all other issues.

5.1.1. Directive's implementation at national level with reference to the key provisions

Categories of firearms: Weapons are classified according to four categories which mirror the ones included in the Firearms Directive Annex I: category A (forbidden weapons and other items), category B (weapons subject to authorisation), category C (weapons subject to declaration) and category D (divided in category D1: weapons subject to registration and category D2: weapons that can be bought freely). Alarm weapons and deactivated firearms are included in category D2 and can be freely bought, except for minors.

Ownership: There are various legitimate reasons to own a firearm, such as sport shooting, hunting, collection (for museums, clubs or individuals) and defence.⁸⁰ As for the requirements to be fulfilled for the ownership and purchase, they only concern Categories B, C and D1⁸¹ and refer to the need:

- to be at least 18 years old;
- to have a shooting licence, an hunting permit, a collector's licence (ongoing implementation) or a specific authorisation for defence purposes;
- to have a medical certificate not older than a month attesting that physical and psychological statuses are compatible with weapon possession;
- to be free of any juridical protection regime;
- not being registered in the national registry of weapon interdictions operated by the Ministry of Interior (FiNIADA⁸²), not having been sentenced to some punishment or not having a behaviour incompatible with the possession of a weapon.

Moreover natural or legal persons possessing firearms shall take all measures to avoid the use of weapons by a third party. To this end the national law prescribes the conditions for safety storage of firearms by private owners and dealers according to the category of firearms.⁸³

⁸⁰ Decree n° 2013-700 considers defence in Art. 32 in case of "Dangerous professional activities" (i.e.: private transporters or enterprises who have to ensure security for their goods or properties) and in Art. 33 for "People exposed to serious risks because of their professional activity".

⁸¹ See LOI n° 2012-304 du 6 mars 2012, Art. 3. For category B there is further need of a specific authorisation by the Prefect and the purchase and ownership of more than one firearm under this category is forbidden.

⁸² Fichier national des interdits d'acquisition et de détention d'armes.

Every time hunters ask for the issuance of a hunting licence or want to buy a new firearm⁸⁴, controls on pending administrative interdictions can be performed electronically through a dedicated application⁸⁵ which allows the dealers/competent institutions (*Office National de la Chasse et de la Faune sauvage* and the National Hunting Federation) to check whether the applicant is registered in the FINIADA system.⁸⁶

In case any interdiction is detected, dealers/competent institutions may directly contact a dedicated contact point at the Ministry of Interior for an additional confirmation of the existence of interdictions and stop the procedure (if interdictions are confirmed) or continue (if interdictions are not confirmed). This system has been operational for 4 years and allows the implementation of approximately 800 controls per day.

Marksman associations are not linked to the national registry of hunters and to "Web armes", so that preliminary controls for the issuance of a sport shooting firearm or for the acquisition of a firearm are performed by the Police on demand.

Ammunitions can be sold only to people legally owning a firearm or, for some of them, upon the presentation of the hunting or sport shooting license.

As for the validity, the authorisation lasts 5 years, while declaration (only for shooters and hunters) and registration are unlimited.⁸⁷

Dealers and brokers: As regards definitions, brokers⁸⁸ are defined as people who, for commercial purposes, link the firearms' supply and demand side.⁸⁹ Brokers generally operate among wholesalers and are responsible for transactions concerning weapons of categories A and B.

In France firearms manufacturers, dealers and brokers need to have an agreement for ownership and a specific authorisation for exerting the activity: a declaration in case they sell firearms belonging to category C or D (10 years⁹⁰) and an authorisation delivered by the Ministry of Defence and renewed every 5 years for category A and B firearms. Moreover, dealers need to have a proper (authorised) shop location and a degree certifying their capacities.

Manufacturers, dealers and brokers have to keep a paper based register of all transactions. This is controlled by the Prefet⁹¹ every year.⁹² Moreover, twice a year the operators dealing

⁸³ Chapitre V, Conservation et transfert de propriété, Section 1 Conservation (Décret no 2013-700 du 30 juillet 2013 portant application de la loi no 2012-304 du 6 mars 2012 relative à l'établissement d'un contrôle des armes moderne, simplifié et préventif).

⁸⁴ Hunters cannot buy category B firearms but only C and D.

⁸⁹ Decree n° 2013-700, Art.1. III, 1°: « Activité d'intermédiation: toute opération à caractère commercial ou à but lucratif dont l'objet est soit de rapprocher des personnes souhaitant conclure un contrat d'achat ou de vente de matériels de guerre, armes et munitions ou de matériels assimilés, soit de conclure un tel contrat pour le compte d'une des parties. »

⁹⁰ Decree n° 2013-700, Art. 91

⁹¹ Art 84, par 2, Section 2, Fabrication et commerce des matériels de guerre, armes et munitions des catégories A et B and Art. 110, Section 4 Obligations de l'armurier dans la procédure de cession des armes et munitions (Décret no

with category A and B firearms have to send the records of all transactions to the Ministry of Defence.⁹³

Marking and traceability: France is a member of the C.I.P. The National Proof House is located in Saint Etienne, where the arms manufacturing industry started to develop in the 16th century. All manufactured firearms have to be marked with indication of the manufacturer, the country, the year, the model, the calibre and the serial number.⁹⁴ No particular technology is required for such exercise. The manufacturer is responsible for marking; for imported firearms, the importer is in charge of doing it. The serial number is stamped on the firearm carcass and if possible on each essential component. Furthermore, a C.I.P. proof house has to double mark every essential component.⁹⁵

All legal owners of firearms and ammunitions subject to authorisation, declaration, or registration on the national territory (e.g., hunters, marksmen, entertainment firms, experts, magistrates, etc.) are traced, together with the identifying information of the held firearms, in the computerised system AGRIPPA. This system is accessible by all interested national authorities (namely the Prefecture and the law enforcement) but not by national authorities of other MS. The system records all firearms in the country, their owners and their movements.

Deactivation: In France⁹⁶ *"a deactivation cannot be permanent when it is done on a previously functioning firearm"*. It is possible to speak about an *"effective deactivation"* when it is done in such a way that reactivation results more expensive in terms of effort and costs than the direct purchase of a functioning firearm on the black market. France developed its own deactivation standards. Since 1973⁹⁷, in order for a deactivation to be completed, all essential components of a weapon (barrel, frame, cylinder head, cylinder, fire system burst) must be deactivated.⁹⁸ The deactivation of the different types of firearm follows special processes designed by the Ministry of Defence.⁹⁹ The competent authority responsible to implement the deactivation is the Proof House of Saint Etienne.¹⁰⁰ At the end of the operations, the Proof House is the only institution authorised to affix the official deactivation proof-marks, to issue the certificate and to store data on the deactivation.

European Firearms Pass: The EFP in France is delivered by the local Prefecture (controlled by the Ministry of Interior). The documents required for both the EFP issuance and renewal (5

2013-700 du 30 juillet 2013 portant application de la loi no 2012-304 du 6 mars 2012 relative à l'établissement d'un contrôle des armes moderne, simplifié et préventif).

⁹² The Police conducts regular inventory of weapons, weapon components and ammunitions.

⁹³ Art 85, Par 2 Obligations des titulaires de l'autorisation (Décret no 2013-700 du 30 juillet 2013 portant application de la loi no 2012-304 du 6 mars 2012 relative à l'établissement d'un contrôle des armes moderne, simplifié et préventif).

⁹⁴ According to Decree n° 2013-700, Art.1. III, 7°(a). The marking of the serial number has to be made on the carcass weapon and if possible on all the essential components.

⁹⁹ Conditions generales adoptées par l'Assemblée Générale de la Chambre de Commerce Industrie et Services Saint Etienne Mont Brison le 21 Juin 2010 et valables à compter du 22 Juin 2010.

¹⁰⁰ The Proof House of Saint Etienne is a private institution managing a public service and employing public personnel. It is directly controlled by the Ministry of Defence, the Ministry of Interior and the Ministry of Industry.

years) are: a proof of identity and residence, a valid licence of firearm ownership. No fee is foreseen neither for the issuance nor for renewal. When entering France, hunters have to show the EFP and demonstrate that they travel with a hunting purpose. As for sport shooters, they need to present a written invitation or the proof of their enrolment in an official competition stating both place and date.¹⁰¹

Information sharing: At national level there are systems for information sharing among the police, the gendarmerie and the customs forces, and among the weapons-related services within the Ministry of Interior and the Prefectures. As for intra-EU information sharing, it can be implemented in the framework of the police cooperation or of the international mutual judiciary assistance.

Penalties: As regards private owners, dealers and brokers, the marking procedures and the EFP holding/renewal, penalties applied to infringements of national laws include: the authorisations withdrawal, the administrative seizure of weapon(s) or the obligation to divest, weapon(s) sale or destruction; and possible penal sanctions. As for deactivation, related sanctions are mostly penal.

5.1.2. Stakeholders' positioning¹⁰² on the implementation of the Firearms Directive

Representatives of users and dealers expressed no need to amend the Directive or its categories. Most representatives believe that market and security concerns can partly be solved addressing and minimizing differences in the implementation of the Directive at local level. More restrictions in terms of acquisition and possession of firearms would be considered disproportionate to existing problems and a violation of the principle of subsidiarity. Users and representatives of the Ministry of Interior agree that the current classification is satisfactory. However, the latter does not see how corrections or clarifications could have binding effects without an amendment of the Directive. Simple incentives or guidelines would not change security challenges that national governments face.

Representatives of users and dealers and representatives of the Ministry of Interior agree on the absence of the need to change the categories listed in the Annex I of the Directive, which are deemed as satisfactory.

The national law on firearms is generally considered satisfying. In particular, rules related to deactivation and marking are considered appropriate and effective in order to ensure the functioning and security of the internal market. Furthermore, users' associations deem the EFP a valuable instrument, though regretting that some MS ask for additional documents to allow the entry of hunters in their territories.

The representatives of the Ministry of Interior observed that the administrative burden brought by the Directive is proportionate and necessary and that the Directive did not impose any important modification because the French law already framed all the required standards.

5.2 Security issues experienced in the last years

Some of the major security concerns reported by the Ministry of Interior are linked to the lack of clarity of the Firearms Directive in relation to a number of key terms, as explained in the « *Note des Autorités Françaises sur les problèmes juridiques liés aux définitions et aux*

¹⁰¹ Art. 145, Decree n° 2013-700, 30th July 2013.

¹⁰² Opinions reported in this paragraph relate to the ones collected during the roundtable organised in Paris on June, 4th with representatives of: the Ministry of Interior, a French association for gunsmiths, a French association for hunters and another for shooters. Answers to the online survey have also been taken into account.

*approximations contenues dans la Directive Européenne 91/477/CE*¹⁰³ », and namely to the following:

- Essential components: the interpretation of the essential components may be different across MS. In some MS the frame can be interpreted as part of the breach-closing mechanism and thus subject to the same rules of firearms while in others it can be sold freely. The same may happen with the grip. The different interpretation of essential components brings MS to mark or deactivate different firearms' parts and thus may create room for criminals to take benefit of these inconsistencies buying, for example, essential components that are considered as such in a MS, in other MS where they are not deactivated or marked. For instance, the French Central directorate of Judicial Police reported cases of illegal purchase of barrels or frames or even the illicit manufacturing of essential components;
- Antique weapons: The EU Directive does not define antique weapons. Many MS choose to have a "cut off" date to define what firearms are classified as antique and they sometimes refer to firearms produced before 1870 (as stated by the Schengen acquis - Convention implementing the Schengen Agreement of 14 June 1985) or to firearms produced before 1899 (as stated by the Regulation 258/2012 implementing Article 10 of the United Nations' Protocol). The absence of a clear definition at EU level brought each MS to unilaterally define what they consider as antique weapons. The existing criteria for classification vary a lot among MS (e.g. year of production, model, rarity, the absence of ammunition on the market, etc.) and can be exploited by criminals to buy antique weapons where criteria are more favourable;
- Deactivation: consistently with the Directive which excludes deactivated firearms from its scope (provided that they are rendered permanently unfit for the use), deactivated firearms can be bought freely in France. Nonetheless several MS do consider deactivated firearms as firearms and adopted specific registration requirements and deactivation procedures. This diversity of approaches caused the circulation in the EU of deactivated firearms with different levels of security and left room for criminals to buy essential components in some MS where they are not rendered permanently unfit for the use by existing deactivation procedures;
- Replicas: the term "replica" has different meanings according to MS. While in the United Kingdom this term seems to have an extensive meaning and covers all objects that have the appearance of a firearm, despite their ability to shoot a projectile or their degree of convertibility, in France the term replica (*replique*) stands for the exact copy of an existing firearm. Replicas in France are thus considered as firearms and are classified like the original firearms they imitate. The main security concerns related to the different definitions and regulations applied to replicas is linked to their potential use for intimidation purposes. In France all criminal offences committed with toys having the appearance of a firearm are punished as they were committed with real firearms. A stricter regulation of toys having the appearance of firearms is deemed disproportionate by the French competent authority with respect to the risks related to these objects. Moreover it would criminalise acts that cannot be considered as criminal (e.g., the game).

Reactivation of deactivated firearms: The French Police reported some problems in the past in relation to the reactivation of deactivated firearms from Spain and Austria where there were flexible procedures and regulations for deactivation. As for Spain, no more cases of

¹⁰³ June, 18th 2014.

reactivation have been detected since when the national procedures for deactivation became more stringent. As for Austria, concerns still persist as all licenced dealers can deactivate a firearm without being bound to specific technical procedures even if they need to follow a code of good conduct. The French representative of the Ministry of Interior reported an increase in reactivated firearms among seized weapons.

Conversion of alarm weapons: The French representative of the Ministry of Interior reported an increasing number of seized firearms which would normally be in category D that have been modified and consequently fall in other categories (e.g.: alarm weapons modified to shot live ammunitions). Since 2002 France has started to have some security concerns linked to the conversion of alarm weapons imported from Turkey. These weapons are built with a strong material and are easily convertible. Similar concerns were linked also to the Tanfoglio GT27 and GT28. In this regard the Police reported the seizure in 2013 in the city of Tours of approximately 40 converted alarm weapons (including Tanfoglio weapons) coming from Portugal.

Law enforcement: The Police enquiries on the traceability of firearms have to face the incomplete recording of all information on firearms. When for example a firearms' dealer closes, he should submit his registry to the Public Authority, but the representatives of the Ministry of Interior reported cases where the information got lost as the obligation to keep the registry was not even known.

Illicit firearms trafficking and disposal: In 2011¹⁰⁴ approximately 63% of all firearms seized by the Police were civilian firearms, and namely: 30% category B firearms (i.e. firearms for defence); 29% category C firearms (52% hunting firearms, and 48% firearms for fairs), and 4% category D firearms (i.e. antique firearms) (see Figure below).

Figure 1 –Firearms seized by the Police in 2011

Source: EY elaboration on data of "Le Panorama des armes en 2011"

12% of seized firearms were military weapons. Among this category, 35% (i.e. 164 firearms) were automatic firearms. This represents a relatively stable phenomenon in the years. The

¹⁰⁴ "Le panorama des armes en 2011", Section centrale armes, explosifs et matières sensibles de la direction centrale de la police judiciaire.

most known, the AK 47 or "Kalashnikov", has been seized approximately 65 times and represents 1.65% of total seized firearms in France. In only 25% of cases, the AK 47 is found alone. In all other situations, it is found associated with other weapons (military, defence, hunting shotguns).

Geographically, according to the ratio of seized weapons on 10,000 inhabitants, Corsica region is at the first rank, as in 2010.

In France the diversion of firearms from the legal market to the illegal one has three main sources:

- Stolen firearms¹⁰⁵: since 2010, the Police Department has been recording a strong increase in the number of thefts (+25.2% between 2010 and 2012, passing from 2,441 to 3,057 stolen firearms in absolute figures¹⁰⁶). 67% of stolen weapons in 2011 were hunting firearms¹⁰⁷ that are not subject to special conservation measures¹⁰⁸ and remain more easily accessible during a burglary. Most of the gun thefts (86%) were committed during a burglary of a home, followed by thefts involving a dedicated local where arms are stocked (6.7%) or an unattended vehicle (3.4%). Firearms thefts are gaining importance in France but it is difficult to quantify precisely the phenomenon, as the thefts are hardly declared and the owners can rarely give formal elements for the identification of the criminal.
- Illicit trade between firearms *amateurs* either directly or at events like "weapons fairs". The French Police investigations confirm the porosity of the exchanges between firearms' lovers and criminals.¹⁰⁹
- Failure to update firearms to new regulations: given that France has been one of the main playing fields of the two World Wars, many people hold old firearms inherited by their families without having the proper authorisation. This represents a pool of illegal firearms that the French competent authorities are trying to manage. In 2012 a licence for collectors allowing interested people to hold these firearms has been envisaged, but the implementing rules still need to be drafted. Thus at the moment these people are considered as illegal owners.¹¹⁰

Similarly, there is a number of firearms that have not been registered after the changes in the national regulation in 2012¹¹¹ (single shot long firearms with smooth bore barrel included in category D1) that may represent a pool of illegal firearms. Moreover, the French Police reported approximately 10 cases, since 2003, of dealers exporting firearms without the requested transfer documents or dealers having bought firearms without recording the transaction in their registries.

¹⁰⁵ "Le panorama des armes en 2011", Section centrale armes, explosifs et matières sensibles de la direction centrale de la police judiciaire.

¹⁰⁶ Ministry of Interior.

¹⁰⁷ The increase in short guns thefts is 71% while the increase in long guns thefts is 104% (source: "Le panorama des armes en 2011").

¹⁰⁸ Specific storage requirements are foreseen by the national law for short guns.

¹⁰⁹ "Le panorama des armes en 2011", Section centrale armes, explosifs et matières sensibles de la direction centrale de la police judiciaire.

¹¹⁰ This situation brought people owning more than two firearms, to ask improperly for a dealer's licence to be legally entitled to own more than two firearms.

¹¹¹ This situation compromises the accuracy of the national statistics on circulating firearms. In France there are 3,865,300 registered firearms. The overall number of circulating firearms is likely to be higher.

Internet: Similarly to other MSs, internet is becoming an increasing concern also for French competent authorities. For some years, the Police started to detect cases of firearms bought through the internet channel.¹¹² Nonetheless a systematic control does not exist yet and it is hindered by juridical difficulties.¹¹³

5.3 The market issues related to civilian firearms

Market structure: France was in the past one of the first EU markets for military firearms due to the strong production of public companies. Producers of military firearms used to produce also civilian firearms; the market was quite concentrated and there were obstacles for new operators to enter the market. The changes in legislation in 1995¹¹⁴ which brought to stricter requirements for the possession of firearms and the financial crisis in 2000 strengthened the decrease of the firearms market.

Currently there are a limited number of French firearms' producers and they are mainly specialised in luxury firearms. Browning, Beretta, Blazer, Verney-Carron, Chapuis Armes, Winchester are the most important firearms' producers, with some of them being branches of the most important producers at European level.¹¹⁵ According to Eurostat Prodcom Database, 5,000 long firearms¹¹⁶ were produced in France in 2013 and sold for 17 million euros. French production is small and stable: between 2008 and 2013, long firearms production value increased at an average growth rate of 16% and ammunitions production value grew of 4.5% on average over the same period.¹¹⁷

Rivolier and Humbert Beretta are the biggest importers. Around 2,000 gunsmiths integrate the overview on the French market for firearms and ammunitions.

Trade: France is a net importer. As for EU MS, its main partners are Italy and Belgium, while Turkey and the US are the first countries of import among outside the EU. As regards exports, the main destinations of French production are Russia and Germany.

¹¹² In 2013 the police faced cases of modified military firearms for cinema (included in category A in France) bought by a French citizen from a firm located in Slovakia. These firearms have been re-sold through the internet and seized by the French Police in Rouen and Angers.

¹¹³ Unless a package containing firearms arrives at the borders partially open and firearms can be discovered accidentally, it is difficult to detect firearms moving across MS when they are not clearly declared.

¹¹⁴ Décret n°95-589 du 6 mai 1995 relatif à l'application du décret du 18 avril 1939 fixant le régime des matériels de guerre, armes et munitions.

¹¹⁵ Amadeus database, 2013.

¹¹⁶ According to Prodcom Database there is no production of short firearms in France.

¹¹⁷ Eurostat Prodcom Database.

5.3.1. Stakeholders' positioning¹¹⁸ on the impact of the Directive on the EU internal market functioning

Producers: the representative of the national association of sporting and hunting firearms producers¹¹⁹ referred to differences in the implementation of the Directive at national level as the main obstacle to the internal trade.

Dealers: Some issues were raised by the representative of dealers as regards the documentation to be presented to competent authorities. The number of repetitions in the questions asked by different Ministries is perceived as an unnecessary workload, and the obligation to send a report twice a year is a double burden given that dealers and brokers already register and send information on every single transaction. Costs linked to marking requirements are considered acceptable and proportionate to the risks linked to firearms circulating across MS.

Users: As for requirements linked to the Directive and concerning users, the representative of a hunters' federation believes that "they are proportionate, since they do not impose unnecessary burdens and do not go beyond what is necessary in order to achieve the objectives of the Directive".¹²⁰ In this regard, the Directive is also considered well-balanced under the subsidiarity point of view, as it leaves MS the possibility to determine themselves the specific conditions for ownership, what constitutes a "good cause" and who can be licenced in order to grant security at national level. However, according to representatives of dealers too heavy regulations and controls and the diminishing trend in hunters may cause serious obstacles to production and trade in the internal market.

Even though the number of applicants to the EFP is quite limited¹²¹, the EFP facilitated the movement of hunting and sport shooting firearms according to representatives of the national associations of hunters and sport shooters. As for the latter, the representative of the French Shooting Federation further strengthened the effectiveness of the EFP reporting that, before the introduction of the EFP, each sport shooter was requested to ask for a specific authorisation signed by the President of the Federation to move across MS. The introduction of the EFP simplified procedures for both marksmen willing to move and competent authorities responsible for the issuance of specific certificates.

However, obstacles to the free movement of hunters and marksmen and their firearms still persist and are linked to the following inconsistencies in the implementing rules applied to the EFP by MS:

- The registration of firearms in the EFP: representatives of users reported that in the past the French Government refused the registration of specific firearms on a Pass because they did not need the registration according to the national rules;¹²²

¹¹⁸ Opinions reported in this paragraph relate to the ones collected during the roundtable organised in Paris on June, 4th with representatives of: the Ministry of Interior, a French association for gunsmiths, a French association for hunters and another for shooters. Answers to the online survey were also taken into account.

¹¹⁹ Source: EY survey, a French producers association for civil firearms and ammunitions.

¹²⁰ Source: a French federation for hunters. EY Survey.

¹²¹ Approximately 80% of French hunters do not move across MS and thus do not ask for the EFP.

¹²² As an example, representatives of users reported that in Germany air guns need to be registered on the EFP while in France this is not the case. The same happens for antique weapons.

- The limit in the number of firearms registered on the EFP (max. 12¹²³). This limit caused cases of people asking for a second EFP.
- The conditions of entry of a firearm in a MS: the entry of a firearm in a MS may be conditioned by the physical presence of the legitimate owner, and no substitute is accepted.
- Representatives of the national associations of hunters and sport shooters raised additional concerns also in relation to the high costs of transfer of firearms and ammunitions that are likely to become an obstacle to the free movement.¹²⁴

5.4 Overall comments and remarks

Various suggestions were raised by involved stakeholders:

- Including deactivated firearms, alarm weapons and antique weapons in the scope of the Directive, in category D firearms in order to guarantee minimum requirements to MS and legitimate any further restriction;
- Clarifying key terms of the Firearms Directive: essential components, antique weapons, alarm weapons, deactivation and replicas. In this regard, the Glossary in use by the Firearms Expert Group established by the DG HOME can be used as a starting point to develop common definitions;
- Clarifying the classification of ammunitions;
- Allowing the sport shooters associations to have access to “*Web armes*” to electronically control the existence of pending interdictions on sport shooters.

Annex 6. Case study on BELGIUM

KEY FEATURES OF THE BELGIAN CASE STUDY	
The civilian firearms sector ¹²⁷	<ul style="list-style-type: none"> • Belgian production is small and stable. About 45,000 long guns and 15,000 short guns are assembled yearly.¹²⁸ • A very high share of production is oriented towards exports. Imports of firearms are unknown due to statistical aggregations of military and civilian firearms. • Belgian network of dealers counts about 800 operators with about 150 active traditional arms shops.¹²⁹
The ownership of civilian firearms ¹³⁰	<ul style="list-style-type: none"> • Belgium counts 644,266 registered firearms in the Central Arms Register (June 2014 - based on provisional data). • There are 27,000 hunters and 16,000 marksmen with the non-obligatory licence (2014, based on provisional estimations). An important share of hunters moves across borders, as 7,274 of them currently hold an EFP.
The transposition of the Firearms Directive and the national legislation	<ul style="list-style-type: none"> • The Belgian law on firearms dates back to 2006 with the Arms Law of June 8th (and its executive royal decrees). Before 2006 the law in force dated to 1933 and was very similar, since 1991, to the 91/477/EEC. • The amendment of the Firearms Directive 2008/51/EC in 2008 did not bring major changes into national legislation as the main provisions included in the Belgian national firearms legislation since 2006 are compatible to the ones of the Firearms Directive.
Main issues related to security	<ul style="list-style-type: none"> • Weapon-enabled crime is not a major problem in Belgium according to the Federal Criminal Police. • There is no robust estimate available for the total amount of illicit firearms in circulation. Belgian police forces estimate there is a minimum of 200,000.22 rifles sold under free trade before 1992 which are still illegally circulating today. • Belgium faces security issues due to reactivation of firearms deactivated in other EU countries with less stringent standards. • Internet sales are a well-known problem but Belgium lacks resources to prevent it.
Main issues related to the market	<ul style="list-style-type: none"> • Belgian producers do not face major issues when trading firearms in the internal market. • The real issue relates to obstacles to the production and trade of firearms outside of the internal market, due to the design of Regulation 2012/258 implementing article 10 of the UN Firearms Protocol.
Good Practices	<ul style="list-style-type: none"> • Weapons fair (popular among collector exchanging used arms and arms pieces), in terms of safety level. Belgium adapted its legislation to reduce the risk of illegal sale of firearms to foreigners (firearms which were freely acquirable in Belgium but not in the others MS). • Firearms registry in terms of learning from the substantial experience of Belgium.

6.1 Overview of the legislation

The Belgian law on firearms dates back to 2006 with the Arms Law of June 8th (and its executive royal decrees). Before 2006 the law in force dated from 1933 and was very similar, since 1991, to the 91/477/EEC. Since the beginning of the 1970s discussions on the need to replace the law had begun namely due to criticisms regarding the complexity of its technical

¹³⁰ Federal Ministry of Justice, interview, June 2014.

specificities and consequent interpretation issues. It was however only in 2006 that the legislation changed, which triggered the case of Hans Van Themsche.¹³¹

The amendment of the Firearms Directive 2008/51/EC in 2008 did not bring major changes into national legislation as the main provisions included in the Belgian national firearms legislation since 2006 are compatible with the ones of the Firearms Directive. This includes the firearms categorisation, definitions of and requirements for private owners, dealers and brokers, marking and traceability and deactivation. The Belgian categorisation is in fact more restrictive than the one set-up by the Firearms Directive, therefore subsidiarity applies (art. 2 par. 1 and art. 3). International rules for marking, traceability and deactivation standards are followed, and correct implementation is verified by the National Proof House.

In Belgium administrative powers are split between the federal, regional and the provincial level. No overlaps in the divisions of powers exist. The federal government has power for defence, justice (army and police) and economic activities (e.g. related to firearms categories, requirements for users, traders and brokers etc.). The attribution of power between the regional and provincial level is made on the basis of the following two concepts: territorial issues (i.e. all issues with a geographical component such as hunting and imports/exports) are dealt with at regional level, individuals' issues at provincial level (i.e. all issues related to people, such as being an arms dealer or collector, possessing firearms).

The regional government is responsible for imports and exports, since 2003. One exception is for imports and exports of military firearms for and from the Belgian army and police forces, which is competence of the federal government. The regional level is also responsible for hunting issues. The tests for obtaining a hunter's licence are organised by the hunting organisations but the list of hunting firearms is defined by regions. The Provincial Governor is in charge of checking requirements.¹³² The communities are also responsible for sport shooting (i.e. marksmen licences). However, particularly in Flanders and less in Wallonie, the communities decided to transfer to the federations the power to decide the list of firearms for marksmen.

6.1.1. Directive's implementation at national level with reference to the key provisions

The 2006 law defined the three following categories of firearms: 1) prohibited arms, 2) arms subject to authorisation and 3) arms freely obtainable. There is hence no category C of firearms subject to declaration. Moreover the category of arms freely obtainable includes antique firearms (black powder and antique firearms produced former than 1895) and non-firearms (for example CO2 weapons). No difficulties were noted on the reconciliation of national categories with the ones included in the Annex I of the Directive. Moreover the Belgian categorisation is more restrictive than the one set-up by the Firearms Directive; therefore subsidiarity applies (art. 2 par. 1 and art. 3).

It is important to note that between 2007 to 2013 the list of freely obtainable firearms was extended, including firearms beyond the current black powder and antique firearms produced before 1895. For this reason imports may have increased after 2006 (i.e. given the increased demand from other countries where freely obtainable firearms in Belgium required authorisation). Intensified controls during firearms fairs preventing people from purchasing those firearms were held in 2011, 2012 and eventually the longer list was abolished in 2013.

¹³¹ When Hans Van Themsche turned 18, he entered a firearms shop, bought a Category D firearm and when he exited the shop he started shooting at people on the street, resulting in several deaths and wounded people.

¹³² Includes: background check, condemnations, mental health, prior sanctions, theoretical and practical exam, medical check, agreement of people living under the same roof, legitimate reason).

Licensing for ownership, dealers and brokers is strictly regulated in Belgium. The Provincial Governor issues licences for ownership of firearms subject to authorisation under the provision of a background check (prior condemnations or sanctions, mental health), a theoretical and practical exam, medical checks, the agreement of people living under the same roof and a legitimate reason.¹³³ Dealers, on their side, need to apply for an individual licence in each province where they deploy activities. The Governor of a province can only grant the licence under the following conditions: background check (based on police documentation), test to proof professional skills with firearms (technical aspects, code of good practises and legislation), demonstrate the source of the funds used to start the trade and compliance with professional standards (rules of good practise imposed by royal decree). In Belgium, ammunitions follow the same rules as firearms and a permit is always requested for their acquisition.

The definition of brokers was introduced by the Federal parliament in 2003 and their regulation was then transferred to regional competences by regional decrees in 2012. According to the 2006 law the same requirements apply for both dealers and brokers. However, only two brokers are registered in Belgium.¹³⁴ When firearms trading involves the physical handling of a firearm, dealers are involved. On the contrary, intermediation in a transaction with origin and destination outside Belgium is the type of business for which there are very limited incentives for the intermediary party to be registered and hence legal (the case of brokers). Therefore in practice, brokers tend to be considered as persons who illegally trade firearms that do not reach the Belgian soil.¹³⁵

Marking in Belgium is performed by producers under the surveillance of the National Proof House¹³⁶, a publicly regulated institution member of the CIP. Since the unification of hallmark design across National Proof Houses from CIP members countries two years ago, firearms proofed according to the CIP standards can be legally introduced in Belgium without additional checks. All firearms imported from non-CIP MS and third countries are subject to the proof tests of the National Proof House. The alteration of marking on firearms is not an issue in Belgium.

Deactivation is a national matter and can only be performed by the Proof House and the procedure is fixed by a royal decree. Experts from the National Proof House also provide technical support to the Federal Police to fight against new re-activation techniques of firearms used for criminal purposes.

As for firearms registration and information sharing, public authorities currently use a computerised data-filing system which dates back to 2010, while the first computerised system was set up in 1989. For firearms subject to authorisation, the information recorded contains owner data, national number, serial number, mark, type, capacity, calibre and length among others. Since October 2010, the National Proof House is exclusively responsible for registering newly produced or imported firearms into the computerised system. This measure was adopted to improve the poor quality of the database which resulted from the lack of knowledge and resources of Police and customs. At the moment there are no initiatives to interconnect data collected at national level to data collected by other MS or third countries, namely due to the

¹³³ In Belgium legitimate reasons encompass: hunting, sports and recreational shooting, collecting, professional need, self-defence, participation in historic/cultural/scientific activities and passive ownership of inherited weapons.

¹³⁴ Source: Federal Ministry of Justice.

¹³⁵ In the nineties, police forces found evidence of some illegal brokers who used the airport of Ostend as a hub. Past well-known cases of Victor Bout, who also lived in Belgium, and Jacques Monsieur, who were not registered brokers and contributed to this misconception. Source: <http://www.justice.gov/opa/pr/2009/November/09-ag-1272.html>

¹³⁶ Banc d'épreuves des armes à feu, Liège.

differences in the current systems in place and to the lack of budget. Currently regions can also have access to the federal registry.

The Arms Law encompasses penalties that include the suspension, limitation or revocation of all authorisations and comparable documents, along with seizure of firearms. In practice, while issuing authorisations is strictly regulated, often controls tend to be less vigorous. In cases of violation judicial prosecution is rarely pursued and cases are typically sorted by paying a fine. The main reason for this practice is the complex judicial knowledge required.

6.1.2. Stakeholders' positioning on the implementation of the Firearms Directive¹³⁷

The amendment of the Firearms Directive 2008/51/EC in 2008 did not pose any administrative difficulties as major changes had already been included in the 2006 change of the National law. All provisions of the Firearms Directive imply an administrative burden which is deemed necessary by public authorities.

Users on their side agree on the legitimacy of such administrative requisites for the sake of public safety, but deplore the lack of consistency in their application and certain disproportionate requirements, caused by the lack of training of local police. They deplore the considerable variety in delays in delivering firearms licences from one police office to another. Also, they believe firearms owners should not be required to present the same documentation for first as well as for subsequent acquisitions of firearms, which implies an unnecessary burden both for police administrations and users. Public authorities, on their side, argue these controls are part of an official strategy to curb impulsive acquisition of firearms.

6.2 Security issues experienced in the last years

Trends in firearms enabled crime

Weapon-enabled crime is not a major problem in Belgium according to the Federal Criminal Police. Evidence in this regard is limited, although an on-going effort is made to systemise the available databases and facilitate the extraction of such information. At the moment however there are very few data on types of firearms used for criminal purposes or on legal status of firearms used for criminal purposes. Only data on armed robberies are now available.¹³⁸ Belgian data on firearms-related homicides indicate a decrease. A Belgian research institute looked at the impact of the legislative change in 2006 and found indications that this decrease is the result of the more restrictive weapons legislation implemented in 2006. They found reduced homicides rates caused by firearms after 2006, while non-firearms related homicides remained stable. The results were even more pronounced for suicides by means of a firearm decreasing by more than a third in the period 2006-2008 compared to the 2000-2005 period. However, the data do not provide details per category of firearms. It is also not possible to distinguish whether the homicides were committed with illegal or legal firearms.

¹³⁷ Opinions reported in this paragraph relate to the ones collected during the roundtable organised in Brussels on June, 18th with representatives of the Ministry of Justice and of the Federal Judicial Police. Phone interviews were also held with: a Belgian representative of producers, a dealers' association, and an association representing users. Answers to the online survey were also taken into account.

¹³⁸ No distinction is made however between robberies with firearms and other armed robberies.

According to the federal police the legal possession of firearms does not represent a major problem in terms of security. If no precise data on crimes committed with legally owned firearms are available, these are assumed by the Federal Police to represent approximately 1% - 5% of crimes committed with firearms. A Belgian research centre is currently working on a study on the modes of acquisition, which will contain valuable information on this issue.

Diversion of legally owned firearms to the illegal market:

- Stolen firearms: according to the limited evidence available across the EU, Belgium ranks 4th among the EU countries with the highest number of stolen and lost firearms¹³⁹. These figures however need to be viewed with caution as they only refer to stolen firearms, and the comparability with other countries is subject to quality concerns. For example since 1989 the continuously updated firearms registry allows the Police in Belgium to perform rigorous controls and keep good track of stolen and lost firearms. Also, public authorities are convinced that many firearms owners, knowing they do not meet the new requirements introduced by the 2006 change of law, declared their firearm as stolen while still illegally holding it.¹⁴⁰
- Re-activation of deactivated firearms: Some issues particularly emphasised by the Federal Police are the security threats due to the re-activation of deactivated firearms and the use of deactivated firearms for intimidation purposes. While strict rules apply in Belgium with the correct implementation being verified by the National Proof House, the lack of harmonisation in deactivation rules in Europe is currently a problem in Belgium. Its importance is further aggravated due to the First World War commemorations, during which de-activated firearms from other countries often enter the country.

The replacement of the Arms Law in 2006 entailed an amnesty period from June 2006 to October 2008, period during which all firearms owners could hand in their guns or declare them. Hence all firearms under the free trade regime prior to 2006 had to be declared and obtain authorisation, justifying a legitimate reason for gun ownership. In 2006 the Central Weapons Register counted 787,858 registered guns. During the amnesty period, 184,821 applications for the renewal of old licences were recorded, over 15,000 licences for passive gun ownership¹⁴¹, more than 200,000 guns were handed in to the police and destroyed¹⁴². Currently¹⁴², all firearms previously belonging to the so-called "grey zone" - bought before 2006 legally but unknown, are either authorised or illegal. Large numbers of them are in fact illegal or uncontrolled. These firearms have generally never been used for hunting or sporting, and are kept without any legal motive.¹⁴³ However robust estimates of illegally held guns do not exist.

In Belgium, the marking of all firearms brought legally from outside Belgium is checked, but this might not be the case in other countries. According to a Belgian research institute, the problem at EU level might arise from the divergence in national control regimes. Criminals

¹³⁹ Based on "Number of stolen and lost firearms recorded in SIS": SIS Database. Data referred at 2012.

¹⁴⁰ See also: Duquet, N., Van Alstein, M. Gun ownership in Belgium. Flemish Peace Centre Report, September 2012.

¹⁴¹ Flemish Peace Centre, 2011.

¹⁴² The process has only recently been completed. Substantial administrative backlogs due to under-staffing caused delays.

¹⁴³ According to a Belgian gun owners' association, this reluctance to declare firearms results from the defiance generated by the police's ill management of the amnesty period. Indeed, they blame police forces for not sufficiently having informed on the requisites for receiving authorisations, pushing gun owners to deliver their properties without expecting them to be confiscated. Also, they believe property rights were violated as gun owners did not receive clear information on their rights to sell firearms instead of delivering them for free, when not obtaining ownership authorisation.

erase the initial marking, and since they do not have to undergo any control in a different MS, it is hard to trace when the gun became illegal. This divergence in legislation creates opportunities for criminals.

Illicit firearms trafficking is a well-known problem largely originating from a weak control of clandestine trafficking at the borders of Europe entering through Bulgaria and Romania.¹⁴⁴ In Belgium there is evidence of criminals exploiting legal procedures for illicit activities by making (parts of) arms disappear into the black market. The central location of Belgium and the functioning of the EU single market abolishing border and custom controls complicate operations against illicit firearms trafficking. The Federal police however do not have the necessary funds for field action and the fight against illicit firearms trafficking does not stand among top priorities assigned to the police. Moreover according to stakeholders (national authorities, police and producers) the two markets are parallel: traditional hunters and collectors use firearms for recreational purposes and would never buy firearms on the black market, while badly intentioned people would never buy expensive and high-quality guns from the legal market. Reinforcing norms for producers does not impact illicit firearms trafficking as such.

Internet sales are also a well-known problem. Belgian law is very strict: firearms cannot be traded to individuals on the internet. As for producers, Browning has a very strict policy: it only sells firearms to other producers, notably in France. Nevertheless, according to a Belgian research institute there are websites where this is possible before it is traced (e.g. eBay on Sunday mornings, or fora of collectors and sports shooters). The Federal Police are well aware of these exchanges of second-hand weapons and pieces but lacks the administrative means to efficiently fight against such traffic, as it does not stand on top of the political agenda.

As for derogations to the Directive's provisions for hunters and marksmen, they do not affect security in Belgium according to the Federal police as hunters and marksmen do not represent a problematic category of users. However, the Competent Authorities identified a niche category of users, the so-called "arms lovers", who look for legislation's weak points to legally create arsenals of firearms by taking advantage of the fact that the legislation does not set a limit in the number of owned firearms. The Authorities believe this is a potential threat to public security and further restriction on total number of firearms legally possessed should be considered.

Weapon fairs in Belgium are now better regulated. While most of these fairs were the occasion for collectors to exchange rare and antique firearms, police forces revealed firearms trafficking activities. Some antique firearms¹⁴⁵ were sold to criminal networks, which could use them for illegal purposes with ammunitions bought on the black market. Belgium adapted its legislation to prevent the possibility for such firearms to be diverted towards the illicit market, with the introduction in 2013 of further restrictions on ownership of antique firearms.

As for future developments, the use of 3D printing techniques in the manufacture of firearms or firearms' components is seen as a future threat and not as a current priority. No cases of 3D printed firearms or firearms components were recorded in Belgium.

¹⁴⁴ Source: Federal Judicial Police.

¹⁴⁵ The very popular Nagant M1895 Pistol, produced in Belgium until 1944.

6.3 The market issues related to civilian firearms

The Belgian civilian firearms market is very small compared to the military firearms market, dominated by the historical plant of FN Herstal. Browning, owned by the Herstal Group, is the major producer. There are also small scale producers of luxury firearms in Belgium (for example Lebeau-Courally and Armurerie Masquelier). The rest of the market is composed of small SMEs contributing to some segments of the value chain. There is no more production of ammunition for civilian use in Belgium: only one important producer of powder (PB Clermont), along with equipment for the production of civil pyrotechnic products (Indusys Technologies) and percussion primers (New Lachaussée).

The Belgian production of civilian firearms reacted positively to the global shrinking demand from 2008 onwards resulting from the financial and sovereign debt crises, and production remained quite stable over the years with no significant reduction in terms of sales volumes. Moreover Belgian imports of firearms have been increasing (measured in value and including both civilian and military firearms) since 2006, while firearms possession has been decreasing (from 16% of households owning a gun in the 1990s to 5% in 2010).¹⁴⁶

The Directive 2008/51/EC was transposed into Belgian national/regional law in 2012 and then entered into force in 2013. There is thus no sufficient background to evaluate the impact of the Directive. So far it did not impact the production of firearms, and 80% of the local production is exported to the internal market.

According to Belgian producers the trade of firearms in the internal market is not a major issue. Trading within the Benelux does not require licences while specific agreements on a system of open licences with some MSs (i.e. France) considerably facilitate trade of firearms towards and from main import and export countries. For the rest of the MS, the system of prior consent applies. Efficiency in issuing licences then varies widely from one national administration to another.

The trade¹⁴⁷ of firearms is administered at regional level and hence statistics on values and volumes are compiled at regional level. Figures however need to be interpreted with caution due to two main reasons:

¹⁴⁶ See also: Duquet, N., Van Alstein, M. Gun ownership in Belgium. Flemish Peace Centre Report, September 2012.

¹⁴⁷ Figures on trade are provided by the Flemish Peace Institute (2013). To interpret them, a number of important remarks were made by the authors:

- All values refer to licensed arms export/import, not to the real value of exported/imported firearms (which is generally significantly lower).
- In the government reports it is impossible to make a distinction between civilian and military firearms. So the figures are for all firearms. A significant share of firearms export from the Walloon region consists of military firearms (mainly produced by FN Herstal). The share of military firearms export from Flemish and Brussels Capital Region is probably negligible.
- Directive 91/477 allows the possibility for open licenses between arms dealers in different MSs. These licenses are not reported by the governments in their annual reports to Parliament. This means they are not included in the figures below and implies a strong underestimation of the volume of intra-EU transfers.
- Most firearms are classified as ML1 (and for the Flemish Region also under ML23.a). Firearms classified under ML2 (Smooth-bore weapons with a calibre of 20 mm or more + other weapons or armament with a calibre greater than 12,7 mm (calibre 0,50 inches) cannot be distinguished from other larger firing systems, so they are not included in the figures.

1) the inclusion of both civilian and military firearms and 2) the sole reference to licenced arms export/import, not to the real value of exported/imported firearms (see Table on metrics and corresponding footnote for more explanations on the availability of trade data in Belgium).

As a consequence, limited observations can be made on Belgian trade patterns particularly in terms of trade balance and imports. Based on the available data on exports and regional diversification the following three points can be made:

- Exports are directed to other MS (80-85%) rather than to extra-EU countries (10-15%);¹⁴⁸
- The Walloon region is the main region exporting civilian firearms produced in Belgium due to the location in Liege of one of Browning's facilities;
- Even though there is no production in the Flemish region, there are 135 dealers compared to 104 in the Walloon region (based on 2010 data). For Brussels the data does not provide an overall good estimation.¹⁴⁹

6.3.1. Stakeholders' positioning on the impact of the Directive on the EU internal market functioning

The real issue relates to obstacles to the production and trade of firearms outside the internal market. It has been reported that Regulation 2012/258 implementing article 10 of the UNFP¹⁵⁰ is poorly adapted and creates administrative obstacles to the trade of firearms outside the EU. The problem lies with import and export licences created related to the transit: to obtain an export licence, producers require both an import licence from the destination country and a transit licence from countries through which firearms will transit. While obtaining the former does not create difficulties, the latter is particularly problematic, as transit routes are often decided just before sending the firearms. In practice, this situation creates logistical difficulties. Besides, companies collaborating for the logistical issues (banks, insurances and transport companies) are defined as "brokers" from the moment they act as intermediaries in the transaction. Most companies are reluctant to be considered as firearms brokers and hence refuse to provide service to firearms producers and dealers. This situation according to producers and dealers of firearms in Belgium harms the legal trade of firearms.

As for dealers, according to the national Authorities, the impact of the 2006 Belgian legislation has been more positive and significant on dealers rather than on producers, particularly the ones specialising in hunting and shooting. The total number of hunters and marksmen diminished in the recent years, as many formerly registered hunters could not justify their hunting activity following the change in law. However, the sales to these categories did not diminish since firearms can now be obtained more easily than before. On the contrary, dealers argue that the strengthening of requirements for firearms' ownership harmed the market for firearms, due to a shrinking number of practicing hunters and shooters.

-
- % of national market share cannot be given since this information is not made public.

6.4 Overall comments and remarks

In terms of security, no direct impact of the Directive at national level can be traced as Belgium had stricter firearms legislation before the introduction of the Directive's amendment in 2008. In terms of firearms market there is no sufficient background to evaluate the impact of the Directive due to its recent implementation in Belgium and other MS.

The implementation of the Firearms Directive in Belgium is satisfactory for all the categories of stakeholders and there is a common agreement on the need to keep the EU framework as it is with some improvements. Various suggestions were raised by involved stakeholders:

- Introduction of common deactivation standards. For optimal results it is suggested that the EC works closely with National Proof Houses and the CIP;
- Introduction of strict minimum standards for marking in all EU MS to avoid misuse and erosion of marks as much as possible;
- Establishment of a National Proof House in all MS irrespective of production;
- Simplification and harmonisation of all technical criteria;
- Establishment of no more than three categories of firearms: the option to reduce the categories to "prohibited" and "under authorisation" firearms is not considered necessary as it is not expected to impact citizen's security;
- Adoption of a broader definition of transit (instead of only transshipment) as other European countries while retaining vigorous control for firearms;
- Improvement of the information sharing across EU MS;
- Emphasis on illegal acquisition – identification of modalities of illegal firearms acquisition and design of specific policy options per country.

Annex 7. Case study on Poland

KEY FEATURES OF THE POLISH CASE STUDY	
The civilian firearms' sector	<ul style="list-style-type: none"> Polish firearms production is 0.1% of European firearms production in 2012.¹⁵³ As for trade, Poland is mainly a firearms importer. The market is characterised by small gunsmiths producing a limited number of firearms per year (57 entrepreneurs and 58 gunsmiths¹⁵⁴).
The ownership of civilian firearms ¹⁵⁵	<ul style="list-style-type: none"> Limited firearms ownership: 1.3% of Polish own a firearm (i.e. 341,420 owners). In 2013 there were 505,171 registered firearms: 58% hunting firearms, 7% sport-shooting firearms and 5% firearms for self-defence;¹⁵⁶ Long-standing hunting tradition. Most of firearms owners in 2013 are hunters (i.e. 150,750 hunters) followed by marksmen (18,804); Poland is among the top destinations for hunting and the share of hunters/marksmen having an EFP is quite limited¹⁵⁷ (approximately 2.5%) as hunters do not need to cross the borders for exerting the activity.
The transposition of the Firearms Directive and the national legislation	<ul style="list-style-type: none"> Some terms of the Directive (e.g. essential components, dealers/brokers) are not properly implemented into national law because of the poor quality of the translation of the Firearms Directive in Polish; Strict interpretation of the Firearms Directive (e.g. requirements for the ownership, brokers and de-activation); Strict interpretation of the national law by the Police forces.
Main issues related to security	<ul style="list-style-type: none"> Firearms smuggling (Ukraine border); Illegal possession of weapons to a lesser extent.
Main issues related to the market	<ul style="list-style-type: none"> Obstacles to the movement of firearms across MS due to paper-based authorisation procedures.

7.1 Overview of the legislation

The two main pieces of Polish legislation on firearms and ammunitions are the Act of 21st May 1999 - on firearms and ammunitions - and the Act of 22nd June 2001 - on performing economic activities in the area of production and trading of explosives, weapons, ammunition, products and technology for military or police purposes.

The Act of 5 January 2011, amending the two aforementioned acts, introduced major legislative changes designing a more flexible regulation for the issuance of sport shooting licences.¹⁵⁸ This is demonstrated by the increase in the number of permits issued in last years, which passed from 13,000 in 1999 to 18,800 in 2013. The 2011 Act mainly brought harmonisation with the Directive, introducing for instance a definition of firearm and of essential component more in line with the European one and providing for the regulation of internet sales. The trading activity had been better shaped, characterising the broker as a

¹⁵³ EY calculations on WFS data for 2012.

stand-alone professional different from the dealer. As for marking, the original article had been complemented with the introduction of European requirements and with a provision for criminal penalties as regards marking infringements.

7.1.1. *Directive's implementation at national level with reference to the key provisions*

Categories of firearms: In Poland there are only two categories of firearms: prohibited firearms and firearms subject to authorisation.

Ownership: According to article 15 of Act of 21st May 1999, to own a firearm the applicant should be at least 21 years old (18 is permitted only with specific authorisation for target shooting or hunting), he/she should have no criminal records and a certification of his/her mental fitness for firearms possession made by a licenced physician. Furthermore, before being granted the licence the applicant needs to pass an exam testing his/her skills in the use of firearms.

Good reasons to ask for a permit may be hunting, sport shooting, collection, commemoration, historical reconstruction, training and self-protection or protection of other persons or properties.¹⁵⁹

According to article 9(6), licence validity for possession is indefinite, unless the owner ceases to satisfy the conditions under which the licence had been granted.

Dealers and brokers. Even though a definition of broker exists¹⁶⁰, thus qualifying a difference between brokers' and dealers' activities, Poland decided to make brokers subject to the same requirements of dealers without taking into account the less risky nature of brokers' business if compared to the dealers' one.

Dealers and brokers have to be aged 25 at least, to document professional preparation, full legal capacity and clean criminal records and to deliver medical and psychological reports every 5 years. Furthermore, they have to ensure proper conditions of place (in terms of localisation and arsenal to perform the activities) and to respect standards of security and storage. Dealers and brokers are obliged to keep records of firearms (such as the type, the model, the caliber, the serial number) and essential components which were purchased and sold, as well as on sellers and buyers (identity, residence). Representatives of the Ministry of Economic Affairs and the Police are in charge of the controls on proper storage and record-keeping.¹⁶¹

Marking and traceability: According to article 18(3) of June 2001 Act, "firearms and each separate, essential component¹⁶² of firearms" shall be marked by the manufacturer. The marking consists of a unique and easy-to-identify code which should include: the country of manufacture, the name of the manufacturer, a serial number and year of manufacture (if not

¹⁵⁹ Act of 21 May 1999, art. 10(3).

¹⁶⁰ Brokers are defined in art. 3(2) of Act of June 2001 through the definition of trading, which "should be understood as a commercial activity relating to the matter of explosives, weapons, ammunitions, (and) products and technologies for military or police forces; including mediation involving negotiation, shopping advice, assistance in contracting and organic movement of explosives, weapons, ammunitions performed on Polish territory".

¹⁶¹ Act of June 2001, art. 34.

¹⁶² Act of 21 May 1999, art. 5 "(1) Prepared or treated essential parts of weapons or ammunition shall be considered a weapon or ammunition. (2) Firearms essential components are the frame, the receiver, the barrel, the chamber and the drum cartridge."

contained in the serial number). Poland is not a member of the CIP and firearms are tested by the Police before entering the market.

As for traceability, the Police have the duty of storing information on firearms and their owners in a dedicated computerised system.¹⁶³ The system registers information on both firearms and owners. Furthermore, Polish Association of Hunters and management boards of shooting associations are obliged to submit every year their current members' list to the appropriate Police authorities, specifying who practices hunting or shooting and the use she/he makes of the weapons. They also have to notify the authorities about expulsion of members within 30 days from the date of expulsion.¹⁶⁴

De-activation: Firearms and all its essential components are defined as deactivated when "*all its relevant parts have been demilitarised in such a way that despite the action of compressed gases resulting from the combustion of propellant it is not possible to launch a projectile, a substance or other element from the barrel; [...] and the re-activation of the firearm is not possible without taking special steps*".¹⁶⁵

Deactivation can be done only by entrepreneurs specifically licenced to manufacture the type of firearms they are in charge of deactivating.¹⁶⁶ The Central Forensic Laboratory of the Police of Poland assesses and approves (or discards) a deactivation on the basis of technical specifications determined by the Ministry of Defence.¹⁶⁷ If the deactivation has been properly done, the Forensic Laboratory will impress a distinctive mark on the weapon.

Only firearms deactivated by the Polish Police according to the above mentioned specifications are not considered firearms anymore and are thus free of permit, and the owner has only to declare their possession to the Police.¹⁶⁸ Firearms deactivated according to other MS' procedures are still considered firearms in Poland as the country does not recognise deactivation procedures performed by other MS.

European Firearms Pass: In Poland there were 5,855 European Firearms Pass holders.¹⁶⁹ The EFP validity is 5 years and it is renewable once. Both the issuance and the renewal cost are PLN 105 (around € 25).¹⁷⁰

Penalties: All the provisions of the Directive are covered by administrative and criminal penalties (see Chapter 5 of the Act of May 1999).

7.1.2. Stakeholders' positioning on the implementation of the Firearms Directive

The overall implementation of the Directive at national level is influenced by the translation of the Firearms Directive from English to Polish¹⁷¹, which results in a number of inconsistencies

¹⁶³ Act of May 1999, art. 27(1).

¹⁶⁴ Act of May 1999, art. 27(5).

¹⁶⁵ Translation. Act of May 1999, art. 6a(2).

¹⁶⁶ Act of May 1999, art. 6a(1).

¹⁶⁷ Act of June 2001, art. 19b(2).

(e.g.: Annex 1, title II A, Category B, point 5, concerning 'semi-automatic' weapons with magazines containing three and more rounds, translated in Polish version as 'single-shot' weapons with magazine for three or more rounds¹⁷²).

The expert, the user's representative and the representative of dealers involved in the study agree on the fact that the Polish legislation interpreted the Firearms Directive in a strict way as demonstrated by the following aspects:

- only two categories of firearms exist (forbidden and under authorisation);
- the requirements for ownership are stringent;
- blank firearms of more than 6 millimetres of calibre are considered as firearms.

Furthermore the Polish Police have a restrictive interpretation of the national law, for example, with reference to the interpretation of the definition of firearm. According to article 7(1) of the Act of May 1999 as amended by the Act of 5 January 2011, a firearm is "*a device which is designed to expel or may be converted to expel one or more projectiles or substance by the action of a propellant*".¹⁷³ However, the national Police seem to consider as a firearm any device which functions thanks to "compressed gases resulting from an exploding material".¹⁷⁴ This definition includes also any blank firearms, even though according to Polish national law, they are not to be considered weapons if under 6 millimetres of calibre.

Another example is given by the "good reason" to own a firearm which may be variable according to specific geographical regions, making it very difficult to get a firearm licence.¹⁷⁵

7.2 Security issues experienced in the last years

Illegal possession of weapons is an issue in Poland. However, it does not seem to represent a threat to security. According to a recent study, only about 0.25% of all pending prosecutions between 2000 and 2011 were linked to illegal firearms possession.¹⁷⁶

The study distinguishes different scenarios for the possession of non-registered weapons, specifically:

- the possession of gas weapons (including gas pistols and revolvers) that, according to the Polish national law, requires a licence only if the kinetic energy leaving the barrel is greater than 17 Joules;
- the possession of old military ammunition fragments, which can be dangerous if gathered in relevant quantity;
- the illegal manufacturing of weapons and ammunitions for hunting purposes such as poaching.

Trends in firearms enabled crime in Poland are not easy to trace. According to a representative of the Ministry of Interior, cases of conversion of alarm weapons and of use of

¹⁷⁵ Interview, Polish users' association.

¹⁷⁶ Jerzy Kasprzak, *Scope of Illegal Possession of Weapons in Poland and Character Study of a Perpetrator of this Crime*, 2013.

objects having the appearance of firearms for intimidation purposes were reported in the country, but no statistical data are available. The interviewee was also not aware of any case of crimes committed with hunting or sporting firearms. Even as regards the re-activation of deactivated firearms there are no statistical data. However, the representative of the Ministry of Interior reports "isolated cases of deactivated firearms having been re-activated" and some more cases of "firearms deactivated in other countries having been re-activated in Poland". He remarks that firearms de-activated according to Polish regulation cease to be firearms; trying to re-activate them results unprofitable.

In general, crimes committed with firearms experienced a decrease, passing from 1,333 cases in 2000 to 386 in 2012. As for crimes committed with gas guns, the trend is also consistently declining, with 406 cases registered in 2000 and 69 in 2012.¹⁷⁷

The following table presents the number of infringements of article 136, paragraphs 2, 3, 4 of the Polish Penal Code between 2005 and 2012. Data show that the overall trend of infringements is declining, mainly driven by the diminishing number of infringements for illegal possession, manufacture or trade in arms and ammunitions. The second most frequent illicit regards the illegal possession, manufacture and trade of ammunitions only, with the number of cases nearly halved during the considered period.

Table 1 : Number of infringements between 2005 and 2012 per provision of article 263 of the Polish Penal Code, paragraphs 1, 2, 3, 4.

Type\ Number of cases	2005	2006	2007	2008	2009	2010	2011	2012
Illegal possession, manufacture or trade of arms and ammunitions	1,998	1,881	1,778	1,518	1,504	1,340	1,186	1,072

TOTAL CASES	3,502	3,312	3,058	2,583	2,496	2,385	2,048	1,903

Source: Ministry of Interior

Stolen firearms: according to representatives of the Ministry of Interior and the Police, the thefts of firearms are not a major issue in Poland. Indeed between 100 and 200 cases per year are reported.¹⁷⁸ Most of stolen firearms are hunting firearms.

Illicit firearms trafficking: the geographical positioning of Poland on the border with third instable countries such as Ukraine and Byelorussia makes this country particularly vulnerable to the risks of firearms smuggling. However, no major cases of smuggling were reported along the study and representatives of the Ministry of Interior reported that this does not represent a major concern to security thanks to tight controls of borders. The interview held with the Polish

¹⁷⁷ The available data do not distinguish between legally and illegally held weapons used in crimes. Source: Ministry of Interior.

¹⁷⁸ Interview with expert from Warmia and Mazury University.

Border Guard confirms the effectiveness of the rules applied and the adequacy of the control standards to guarantee security to EU citizens.¹⁷⁹

According to the Polish Border Guard, illegal firearms may also come from the Czech Republic, Slovakia and the United States. Additional illegal firearms can be smuggled from the countries of the Balkan peninsula that experienced conflicts on their territories relatively recently.

Future developments: According to a Polish firearms dealer's view, one of the impacts of the EU Directive regards internet sales. The Directive "changed the role" of the Firearms Act of May 1999, enabling consumers to "on-distance" purchase, though only around 100 firearms are bought online each year in Poland. Furthermore, this online business faces two critical issues in terms of logistic. Firstly, the technical requirements for the company that transfers the firearm are so strict¹⁸⁰ that only one firm in the country can meet them. Secondly, the post offices often do not have the facilities to keep the firearm before the purchaser collects it. As a consequence, if this does not happen quickly the firearm is sent back.

As regards internet sales security, there are diverging opinions. On the one hand, the representative of the Ministry of Interior considers internet sales as a possible threat to security, and suggests that the Directive should be updated to take into account possible future developments in this direction. On the other hand, the representative of users notes that internet trade in firearms requires the same formalities as a regular sale, which would reduce the possible illegal implications of such a practice. Furthermore, even though the purchase can be online, the transfer of a firearm is still physical, since the buyer has to go in a shop to get the weapon.

As for 3D printing, in EU countries the manufacture of firearms and components with this new technology is not an issue as in the USA, since all firearms' manufacturing is subject to government permission. Furthermore, it is much easier to illegally manufacture parts of weapons by means of traditional machines which are in free circulation, cheaper and much more precise, such as Computerised Numerical Control machines.¹⁸¹

7.3 The market issues related to civilian firearms

Firearms ownership is limited in Poland: only 1.3% of Polish citizens own a firearm (i.e. 341,420 owners) in 2013. In the same period there were 505,171 registered firearms, of which more than half (58%) were hunting firearms (for 150,750 registered hunters), 7% sport-shooting firearms (for 18,804 registered marksmen); and 5% were firearms for self-defence.¹⁸² The long-standing hunting tradition of the country is demonstrated also by the low share of hunters/marksmen having an EFP¹⁸³ (approximately 3.45%), as Poland is among the top destinations for hunting, they do not need to cross the borders to exert the activity.

¹⁷⁹ "During the process of border crossing, the Polish Customs Service is responsible for the proper control of the compliance of imported firearms with the declaration provided. The Border Guards perform the checks of the transport upon a "preliminary transport permit" and a "transport permit" issued by the locally relevant Administrative Proceedings Division of Police or by the Consul of the Republic of Poland." Source: Police Border Guard, interview.

¹⁸⁰ Usually firearms bought online are transferred by car.

¹⁸¹ Interview, Polish users' association and Polish firearms dealer.

¹⁸² Polish Police statistics on firearms.

¹⁸³ 5,855 EFP owners in June 2013 according to the Polish representative of the Ministry of Interior.

Market Structure: Polish firearms production is very limited: according to WFSA data, in 2012 Poland produced 2,000 long and 9,000 short firearms, representing 0.1% of European production. A clear picture on producers is hardly retrievable, but according to information provided by the Ministry of Interior, one of the most important firearms producers seem to be Mesko (previously Bumar Amunicja). Overall, 57 entrepreneurs and 58 gunsmiths have been counted by the Ministry as operating on the market, together with 108 brokers and 322 dealers.

As for trade, Poland is mainly a firearms importer. In 2013 its' share over total EU import was 3.24%, of which 70% came from EU countries.¹⁸⁴ Its' main trade partners in Europe are the Czech Republic, Germany and Italy, while as for non-EU countries are Norway and Russia. Polish export is also limited: in 2013 it was 1.16% of total EU export in value, and 96% of this came from outside the EU.¹⁸⁵ Its main partners are Norway, Bulgaria, Mali, and, since the latest years, Saudi Arabia.

7.3.1. Stakeholders' positioning on the impact of the Directive on EU internal market functioning

The cross-border movement of firearms appears to be limited by:

- procedures to get import/export and transfer permits, which are still managed by fax;¹⁸⁶
- lack of transparency as regards the national contact points that should support economic operators and MS competent authorities in case of difficulties;¹⁸⁷
- information costs that economic operators and competent Authorities have to bear in case of import/export/transfer when a MS implements the Firearms Directive according to different rules.¹⁸⁸

Moreover a market issue was raised by a representative of users in relation to after-sale services, which seem to result in an unequal treatment of domestic and foreign (coming from a different MS) clients¹⁸⁹ willing to send back a firearm to the seller. The lack of provisions regulating these transfers makes the purchase of firearms in a different MS less appealing given the difficulties that a buyer can encounter when willing to use after-sale services.

Dealers: according to a dealer's view, the procedures entered into force due to the EU Firearms Directive did not bring any additional burden even though the records to be transmitted on transactions are now more detailed. Nonetheless, the high level of bureaucratisation was mentioned as one of the key obstacles to foreign investments in the civilian firearms sector.¹⁹⁰

Users: The application of the same requirements to dealers and brokers results in an obstacle to the internal market, because any person who wishes to start a business that involves only

¹⁹⁰ Interview, Polish firearms dealer.

trading has to comply with the same strict requirements foreseen for those exerting also manufacturing and dealing activities. In particular, this blocks the access to market for micro- and small-business entities by raising the financial entry barriers with legal requirements (concession).¹⁹¹

According to the users' representative, the restrictive interpretation of the law and the existence of only two categories (forbidden and under authorisation) in Poland hinders a good functioning of the internal market. This can be noticed for instance in the treatment of alarm weapons as firearms. This approach indeed obstructs the market and trade of this type of weapons. For instance, the Shooting Development Foundation had to ask to a German manufacturer to produce ad hoc alarm weapons less than 6 mm of calibre in order for these firearms not to be considered guns in the Polish market.

Another limit to a smooth market functioning consists in the lack of provisions supporting hunters with a European Firearms Pass to buy ammunitions in the country of destination. This forces them sometimes to move with great amounts of ammunitions, which may represent a threat to security.

TOPIC	METRICS	
Structure of the civilian firearms market	Number of firms producing civilian firearms and ammunitions in the country per size and their related share on the total number (i.e. Large Enterprises, from 250 employees; SMEs <250 employees; micro-enterprises, <10 employees)	57 entrepreneurs and 58 gunsmiths <i>Source: Ministry of Interior</i>

¹⁹¹ Interview, Polish users' association.

7.4 Overall comments and remarks

The contacted stakeholders expressed a series of suggestions as possible areas of improvement for the firearms Directive.

As regards categories, there are diverging opinions. While the representative of the Ministry of Interior asks for the reduction of categories to two in all MS, for security reasons, the representative of users, prefer the four categories introduced by the Directive. This would not only contribute to boost the market, but it would also improve security, given that many more people would be encouraged to declare the firearms they own.

The harmonisation of the Directive implementation at national level is equally supported by Government representatives and by the representative of users. The Government states the need to harmonise the legislation on essential parts and components (among pieces of EU legislation and among MSs) and to improve the application of article 1 in Poland by means of a regulation. Users' representatives request for an overall harmonisation of firearms de-activation procedures to enable mutual recognition of de-activation certificates across MS.

The following aspects were highlighted as areas of future intervention of the EU:

- improvement of the Polish translation of the Directive (e.g.: definition of firearms and of dealers/brokers and of essential components, aligning the latter with the definition provided in the UNFP);¹⁹²
- introduction of a provision to enable EFP holders to purchase ammunitions abroad;¹⁹³
- spread more information on which types of firearms can be entered in a country with the EFP and on the documents needed together with the pass;¹⁹⁴
- strengthen the involvement of relevant stakeholders in the decision-making related to future revisions of the Directive;¹⁹⁵
- extension of the scope of the transfer permit to allow foreign firearms purchasers to take advantage of after-sales services across MSs.

Additional specific points of attention targeted to the national Authority were raised as regards to:

- the possibility to sell firearms on internet that shall be further regulated;¹⁹⁶
- the need for digitalisation of the transfer procedures.¹⁹⁷

Evaluation of the Firearms Directive

- Annexes -

CRITERIA	EFFECTIVENESS
Evaluation question	To what extent has the Directive contributed to an efficiently operating internal market for firearms? To what extent has the Directive achieved its' aim with regard to the security and protection of health of persons?
Understanding the question	Evaluating whether and to what extent have the set targets been achieved so far at both EU and MS level, by taking into account both the general goals related to the functioning of the internal market and the security of EU citizens. The assessment of the overall achievements will be carried out by taking into account the different areas of intervention of the Directive and the specific provisions contributing to the general goals.

SUB-QUESTIONS	JUDGEMENT CRITERIA	ANALYTICAL APPROACH	INDICATORS AND DESCRIPTORS	SOURCES
<p>Which are the current patterns and trends concerning the firearms market?</p> <p>Which are the trends concerning criminal offences and illicit trafficking related to firearms?</p> <p>Which changes occurred following the Directive 91/477/ECC and its' amendment?</p>	The implementation of the Directive will be framed in the context of market and criminal trends analysis.	<p>Desk and field research with specific focus on:</p> <ul style="list-style-type: none"> changes in the market structure, production and size of the internal trade since the entry into force of the Directive and the modifications introduced in 2008; trends in crimes due to firearms, per category of firearm. emerging security issues 	<ul style="list-style-type: none"> Statistical data on market and security issues (see the criteria "Relevance"). <p>Specific focus on:</p> <ul style="list-style-type: none"> Evidence on changes occurred in terms of the categories of firearms produced and/or marketed by EU producers; Changes of the import/export features and routes (i.e. import/export of different types of firearms intra- and extra-EU). 	<p>Primary sources: MS Competent authorities, representatives of the producers, dealers and brokers, EU Expert groups.</p> <p>Secondary sources: Eurostat statistics on trade, databases for the collection of economic and financial data of the main companies, Eurobarometer survey 2013.</p>

Evaluation of the Firearms Directive

- Annexes -

SUB-QUESTIONS	JUDGEMENT CRITERIA	ANALYTICAL APPROACH	INDICATORS AND DESCRIPTORS	SOURCES
<p>Is the categorisation of firearms set out in Annex I of the Directive effective in the view of a smooth functioning of the internal market and protection of citizens?</p>	<p>The Directive does not provide for full harmonization of rules, whereas the MSs can apply stricter rules.</p> <p>The answer to this evaluation question is aimed at understanding whether the application of the categorisation of firearms in MSs grant safer conditions for EU citizens and simpler procedures for economic operators.</p>	<p>Analysis of the classification of firearms in MSs and main approaches.</p> <p>Estimate economic importance of the sector.</p> <p>Risks analyses related to the illicit use of firearms.</p> <p>Assessment of the application of the exceptions set out in the Annex I of the Directive on alarm or signal weapons, deactivated firearms and replicas.</p>	<p>Number of registered hunters and hobby marksmen.</p> <p>Number of firearms circulating in the market.</p> <p>Reports on criminal offences due to illicit use of civilian firearms (particularly those under categories B, C and D will be taken into account).</p> <p>Issues (security issues and obstacles for economic operators) related to alarm or signal weapons, de-activated firearms and replicas.</p>	<p>Primary: MS authorities, Representatives of producers, dealers and brokers, Firearms users, including hunters and marksmen.</p> <p>Secondary: national rules on the classification of firearms; Relevant Commission documents on the matter (COM (2012) 415 final)</p> <p>Data from the national/European associations of manufactures and firearms users</p>
<p>To what extent rules for firearms licensing ensure a high level of protection from criminal purposes?</p> <p>How effective are the rules for the issuance of licensing for dealers and brokers and for the acquisition and possession of the firearms?</p>	<p>With reference to the authorisations for firearms dealers, brokers and owners, the Directive defines only basic requirements (the obligation for dealers and brokers to record data; the obligations to get an authorisation for owners). The analysis will focus on assessing the:</p> <ul style="list-style-type: none"> • Requirements to be fulfilled for the acquisition and ownership of a firearm; • Mandatory requirements for dealers and brokers implemented in MS; • Supervision by MS's authorities on the mandatory information registers of dealers and brokers. 	<p>Analysis of the current practices in MS and the issues encountered.</p>	<p>Evidence on criminals having acquired firearms through legal procedures and lawful purchase;</p> <p>Share of MS requiring medical checks as well as criminal record checks as a condition for the lawful purchase and ownership of any firearm;</p> <p>Share of MS providing for time-limited licences subject to renewal.</p>	<p>Primary:</p> <p>MS authorities, Representatives of the producers, dealers and brokers, Firearms users, including hunters and marksmen, other stakeholders: International bodies, associations, research institutes and other experts.</p> <p>Secondary:</p> <p>Implementing rules and administrative provisions at national level.</p>

Evaluation of the Firearms Directive

CRITERIA	EU ADDED VALUE
Evaluation question	To what extent has the Directive had an added value? To what extent could the EU added-value be improved? To what extent has the EU legislation contributed to reach the objectives, as opposed to national legislation?
Understanding the question	Assessing to what extent the results of the EU action are additional to the value that would have resulted from action at MS level.

SUB-QUESTIONS	JUDGEMENT CRITERIA	ANALYTICAL APPROACH	INDICATORS AND DESCRIPTORS	SOURCES
Did the classification of firearms and the definition of related rules for their acquisition and possession contribute to the better functioning of the internal market and improved security?	<ul style="list-style-type: none"> • Simplification of the circulation of firearms for civilian use across MS; • Improved security due to the clarification of which firearms are banned and which require a licence, or increased diversion of legal trade of weapons to illegal channels. 	<p>Analysis of the data on licit and illicit market, on criminal offences due to firearms.</p> <p>Analysis of the cross-border trade, sporting and hunting activities.</p>	<ul style="list-style-type: none"> • Trends in criminal offences due to firearms; • Trends in illicit trafficking. 	<p>Primary: MS authorities, Representatives of the producers, dealers and brokers, Firearms users, other stakeholders: International bodies, associations, research institutes and other experts.</p> <p>Secondary: Statistical data on the size of the market and trends in criminal offences due to firearms. Relevant Commission documents.</p>
Has the cross-border movement of firearms for licit purposes been simplified and improved?	Ability of hunters and shooters to move across the MS thanks to the European firearms pass	<p>Analysis of the application of rules related to the issuance of the European Firearms pass in the MS.</p> <p>Harmonization of procedures for obtaining the firearms pass in MS.</p>	<p>Number of European Firearms Pass holders and, possibly, trends over the years.</p> <p>Number and types of additional information requested to hunters and shooters holding a Firearms Pass and moving across MS (as a means to assess the simplification introduced)</p> <p>Changes in the number and types of information requested to hunters and shooters moving across MS after the introduction of the Firearms Pass</p>	<p>Primary: MS authorities, Representatives of the producers, dealers and brokers, Firearms users, other stakeholders: International bodies, associations, research institutes and other experts.</p> <p>Secondary: Implementing rules and administrative provisions concerning the European Firearms pass at national level;</p> <p>Relevant Commission documents on the matter (COM (2012) 415 final)</p> <p>Data from the national/European associations of manufactures and users of sporting firearms.</p>

Annex 9. Answers to the evaluation questions

Evaluation question	Ref. in the Final Report
Relevance	
<p>1. To what extent do the objectives and scope of the Directive correspond to the needs and risks defined?</p> <p>The Firearms Directive proves to be relevant to current market needs. Concerns raised by economic operators (obstacles and burden generated by different classification of firearms, different rules applied to the same type of firearm and different procedures and requirements adopted at national level) do not relate to the Directive itself but rather to the different implementing measures and procedures that MS have adopted. As for security, most of concerns at EU level fall within the scope of the Directive and relate to the terms “convertibility” and “essential components”. Other concerns, related for instance to altered or erased marks and firearms thefts, have a more local dimension and would require an improved sharing of responsibilities among MS to adequately address them. New technologies (e.g. 3D printing) and new sales channels (e.g. internet) may challenge in the future the scope of the Directive.</p>	Par. 4.2
<p>2. To what extent did the legislative measures contribute to the objectives?</p> <p>The establishment of minimum requirements for ownership together with the definition of minimum and common danger thresholds (categories) for firearms circulating in the EU are conditions that have increased overall security and prevented MS from adopting less stringent regulations. Also deactivation requirements positively contributed to the security objective; however the lack of common deactivation procedures and the fragmentation of responsibilities in the process have left room for criminals to benefit from the existing differences. The introduction of marking requirements has positively contributed to the objective of improving the tracing of firearms, strengthening law enforcement capacities in dealing with cross-border criminal offences involving civilian firearms. However, the lack of a common understanding on essential components creates uncertainties across MS and security concerns related to illicit trade of unmarked components. Furthermore, the European Firearms Pass strongly contributed to the simplification of procedures for the transfer of hunting and sport shooting firearms across MS.</p>	Par. 4.3
Effectiveness	
<p>3. To what extent has the Directive achieved its’ aim with regard to the security and protection of health of persons?</p> <p>The level of security and protection against criminal acts and illicit trafficking has been improved mainly through the introduction of additional tracing requirements for MS competent authorities and dealers. The comprehensiveness and accuracy of information on firearms and firearms owners/dealers available to law enforcement has improved remarkably and is expected to further increase once all the national computerised data systems will be fully operational. However, cases of conversion of alarm weapons, of re-activation of de-activated firearms and of illegal trade in firearms parts suggest the existence of areas for improvement.</p>	Par. 4.3

Evaluation of the Firearms Directive

- Annexes -

4. To what extent has the Directive contributed to an efficiently operating internal market for firearms?	Par. 4.3
The introduction of categories and related regulatory regimes allowed preventing the potential market distortions linked to the abolition of the internal controls. However, the different interpretations at national level have limited the magnitude of the expected benefits of the EU intervention and to a minor extent created some obstacles to the movement of hunters and marksmen. In this regard, a number of concerns related to specific obstacles and burdens on producers, hunters and marksmen have been raised.	
Efficiency	
5. Are the results achieved at a reasonable cost? In particular is the administrative burden created by the implementation of the Directive's concepts and procedures considered proportionate?	Par. 4.4
The Directive's results have been achieved at reasonable costs based on the analysis of costs and stakeholders' perception of the burden generated by the Directive. Costs linked to the implementation of the Directive's provisions are justified and acceptable, they are fairly distributed among interested stakeholders, often serve more than one objective and no infrastructure investments are required (except for the creation of a computerised data-filing system).	
Consistency	
6. Is the scope of the Directive clear, or are there diverging interpretations within Member States?	Par. 4.1
The scope of the Directive is generally clear exception made for the definition of "convertibility" as it leaves room for uncertainty on the classification of alarm weapons as firearms across MS.	
7. To what extent have the definitions of key terms of the Firearms Directive (such as dealer, broker, authorisation, notification, licence) been introduced in national transposition laws and measures? To what extent do Member States apply diverging definitions which might affect the objectives of the Directive?	Par. 4.1
The analysis has raised significant differences in the interpretation of some key terms at national level. Essential components, brokers, alarm weapons and antique weapons are among the most controversial. The inconsistencies of the EU legislation with the United Nations Firearms Protocol as for the definition of essential components and the lack of clarity of the Directive in the definition of a broker, of the convertibility criteria for alarm weapons and of the criteria to define an antique weapon, left room for national interpretations and in some cases to security problems (e.g. trade in parts and components, conversion of alarm weapons).	
8. To what extent is the legislative measure coherent with other pieces of legislation dealing with weapons?	Par. 4.1
The analysis highlighted a number of inconsistencies between the Directive and the United Nations Firearms Protocol (UNFP). The analysis has raised, for instance, ambiguity around the definition of essential components (as included in the Directive) and parts and components (as included in the UNFP); whether essential components should be considered only as the ones indicated in the Directive or include additional parts as suggested by the UNFP; whether to consider de-activated firearms as firearms (as suggested by the UNFP) or not.	

Evaluation of the Firearms Directive

- Annexes -

European added value	
<p>9. To what extent has the Directive had an added value? To what extent could the EU added-value be improved?</p> <p>The added value of this Directive lies in the common regulatory framework for firearms regulation that would not have been achieved through national or bilateral interventions. Moreover, the EU Directive has enhanced transparency of MS' national firearms control policies thus facilitating cross-border cooperation. The EU added value would likely be improved with regards to both security and market if an improved harmonisation of interpretations and implementing procedures would be achieved. Nevertheless, since firearms relate to national competencies such as criminal law and security, this would require a direct accountability and involvement of MS.</p>	Par. 4.5
<p>10. To what extent has the EU legislation contributed to reach the objectives, as opposed to national legislation?</p> <p>Most of the issues described in the study are partly related to differences in national legislation and clearly assume a cross-border nature. Vulnerabilities of a single MS to criminal activity (e.g. conversion of alarm weapons, illicit trafficking of firearm parts) affect the EU as a whole. Such differences represent also an obstacle to controls and police cooperation across MS. Based on this, effective action to reach the objectives of ensuring a high level of security for EU citizens and allowing the cross-border movement of firearms could have been taken only at EU level.</p>	Par. 4.5
